*Empirical Methods for Exploiting Parallel Texts* I. Dan Melamed, 2001 This book lays out the theory and the practical techniques for discovering and applying translational equivalence at the lexical level Parallel texts bitexts are a goldmine of linguistic knowledge because the translation of a text into another language can be viewed as a detailed annotation of what that text means Knowledge about translational equivalence which can be gleaned from bitexts is of central importance for applications such as manual and machine translation cross language information retrieval and corpus linguistics The availability of bitexts has increased dramatically since the advent of the Web making their study an exciting new area of research in natural language processing This book lays out the theory and the practical techniques for discovering and applying translational equivalence at the lexical level It is a start to finish guide to designing and evaluating many translingual applications *Empirical Methods for Exploiting Parallel Texts [microform]* Melamed, Ilya Dan, 1998

Computational Linguistics and Intelligent Text Processing Alexander Gelbukh, 2003-01-31 CICLing 2003 www CICLing org was the 4th annual Conference on Intelligent Text Processing and Computational Linguistics It was intended to provide a balanced view of the cutting edge developments in both the theoretical foundations of computational linguistics and the practice of natural language text processing with its numerous applications A feature of CICLing conferences is their wide scope that covers nearly all areas of computational linguistics and all aspects of natural language processing applications The conference is a forum for dialogue between the specialists working in these two areas This year we were honored by the presence of our keynote speakers Eric Brill Microsoft Research USA Aravind Joshi U Pennsylvania USA Adam Kilgarriff Brighton U UK and Ted Pedersen U Minnesota USA who delivered excellent extended lectures and organized vivid discussions Of 92 submissions received after careful reviewing 67 were selected for presentation 43 as full papers and 24 as short papers by 150 authors from 23 countries Spain 23 authors China 20 USA 16 Mexico 13 Japan 12 UK 11 Czech Republic 8 Korea and Sweden 7 each Canada and Ireland 5 each Hungary 4 Brazil 3 Belgium Germany Italy Romania Russia and Tunisia 2 each Cuba Denmark Finland and France 1 each Word Sense Disambiguation Eneko Agirre, Philip Edmonds, 2007-11-16 Graeme Hirst University of Toronto Of the many kinds of ambiguity in language the two that have received the most attention in computational linguistics are those of word senses and those of syntactic structure and the reasons for this are clear these ambiguities are overt their resolution is seemingly essential for any practical application and they seem to require a wide variety of methods and knowledge sources with no pattern apparent in what any particular stance requires Right at the birth of artificial intelligence in his 1950 paper Computing machinery and intelligence Alan Turing saw the ability to understand language as an essential test of intelligence and an essential test of language understanding was an ability to disambiguate his example involved deciding between the generic and specific readings of the phrase a winter s day The first generations of AI researchers found it easy to construct amplexes of ambiguities whose

resolution seemed to require vast knowledge and deep understanding of the world and complex inference on this knowledge for example Pharmacists dispense with accuracy The disambiguation problem was in a way nothing less than the artificial intelligence problem itself No use was seen for a disambiguation method that was less than 100% perfect either it worked or it didn't Lexical resources such as they were were considered secondary to non linguistic common sense knowledge of the world *Routledge Encyclopedia of Translation Technology* Chan Sin-wai,2023-04-26 *Routledge Encyclopedia of Translation Technology* second edition provides a state of the art survey of the field of computer assisted translation It is the first definitive reference to provide a comprehensive overview of the general regional and topical aspects of this increasingly significant area of study The Encyclopedia is divided into three parts Part 1 presents general issues in translation technology such as its history and development translator training and various aspects of machine translation including a valuable case study of its teaching at a major university Part 2 discusses national and regional developments in translation technology offering contributions covering the crucial territories of China Canada France Hong Kong Japan South Africa Taiwan the Netherlands and Belgium the United Kingdom and the United States Part 3 evaluates specific matters in translation technology with entries focused on subjects such as alignment concordancing localization online translation and translation memory The new edition has five additional chapters with many chapters updated and revised drawing on the expertise of over 50 contributors from around the world and an international panel of consultant editors to provide a selection of chapters on the most pertinent topics in the discipline All the chapters are self contained extensively cross referenced and include useful and up to date references and information for further reading It will be an invaluable reference work for anyone with a professional or academic interest in the subject **Bibliography of Translation Studies: 2001** Lynne Bowker,2017-07-05 A volume of selected annotated references arranged under specific headings to provide a non partisan guide to teachers involved in designing courses in translation and or interpreting **Computational Linguistics** ,2002 *Journal of Linguistics* ,2001 **Machine Learning, ECML- ...** ,2003 *Linguistics* ,2003 **ECAI 2004** Ramon López de Mántaras,Lorenza Saitta,2004 This is the Golden Age for Artificial Intelligence The world is becoming increasingly automated and wired together This also increases the opportunities for AI to help people and commerce Almost every sub field of AI had now been used in substantial applications Some of the fields highlighted in this publication are CBR Technology Model Based Systems Data Mining and Natural Language Techniques Not only does this publication show the activities capabilities and accomplishments of the sub fields it also focuses on what is happening across the field as a whole Association for Computational Linguistics 39th Annual Meeting and 10th Conference of the European Chapter Association for Computational Linguistics.
