

## **Meteorology Study Guide**

Use this guide to review your notes, textbook readings, and class activities to prepare for quizzes, tests, and exams.

### **I. Introduction to Meteorology**

- **Definition of Meteorology:** The study of the atmosphere and its phenomena, including weather and climate.
- **Weather vs. Climate:** Weather refers to the day-to-day state of the atmosphere (e.g., temperature, precipitation, wind). Climate is the long-term average of weather patterns in a specific region.

### **II. Atmospheric Composition and Structure**

- **Atmospheric Composition:**
  - Major gases: Nitrogen (78%), Oxygen (21%), Argon (0.9%), and trace amounts of other gases like carbon dioxide.
  - Importance of water vapor: Its role in cloud formation, precipitation, and heat transfer.
- **Layers of the Atmosphere:**
  - Troposphere: Lowest layer, where weather occurs. Temperature decreases with altitude.
  - Stratosphere: Contains the ozone layer, which absorbs harmful UV radiation. Temperature increases with altitude.
  - Mesosphere: Meteors burn up in this layer. Temperature decreases with altitude.
  - Thermosphere: Very hot layer due to absorption of solar radiation. Auroras occur here. Temperature increases with altitude.
  - Exosphere: Outermost layer, gradually fades into space.

### **III. Heat Transfer**

- **Conduction:** Heat transfer through direct contact (e.g., the ground warming the air above it).
- **Convection:** Heat transfer through the movement of fluids (liquids or gases) (e.g., warm air rising and cool air sinking).
- **Radiation:** Heat transfer through electromagnetic waves (e.g., the sun's energy warming the Earth).

### **IV. Atmospheric Pressure and Wind**

- **Atmospheric Pressure:** The force exerted by the weight of the atmosphere.
