## Cell: Theory, Structure and Function

What are cells?

- Cells are the basic building blocks of all living things.
- The human body is composed of trillions of cells.
- They provide structure for the body, take in nutrients from food, convert those nutrients into energy, and carry out specialized functions.
- Cells also contain the body's hereditary material and can make copies of themselves.

## Cell Theory

**Robert Hooke** improved the design of the existing compound microscope in **1665**.

- His microscope used three lenses and a stage light, which illuminated and enlarged the specimens. These advancements allowed Hooke to see something wondrous when he placed a piece of cork under the microscope. Hooke detailed his observations of this tiny and previously unseen world in his book, *Micrographia*. To him, the cork looked as if it was made of tiny pores, which he came to call **"cells"** because they reminded him of the cells in a monastery.

**Antonie van Leeuwenhoek** a dutch scientist in **1674**

- published his observations on tiny living organisms which he named animalcules.
- was the first to observe under his microscope the structure of a red blood cell of different animals as well as a sperm cell.

The leading botanists in his time, **Robert Brown** in **1831**

- was able to compare diverse kinds of plant specimens under the microscope.
- He markedly indicated that there is a common thing about them-they are all composed of cells, and inside the cell is a dark dense spot which he termed as the **nucleus**.

German botanist **Matthias Schleiden** (**1838**)

- concluded that all plant parts are made of cells.

**Theodor Schwann** (**1839**),

- botanist and a close friend of Schleiden,
- stated that all animal tissues are composed of cells.
  - In 1855, the third tenet of Schwann were replaced by the Rudolph Virchow's powerful dictum, *Omnis cellula e cellula*, "All cells only arise from pre-existing cells".

The discoveries made by **Hooke**, **Leeuwenhoek**, **Schleiden**, **Schwann**, **Virchow**, and others led to the formulation of the cell theory. This theory can be summed up into three basic components:

- (1) all living things are composed of one or more cells;
- (2) the cell is the basic unit of life;
- (3) all cells arise from preexisting cells.
