Faces of Mathematics A. Wayne Roberts, 1997-01 *Faces of Mathematics* Arthur Wayne Roberts, Dale E. Varberg, 1982 Faces of Mathematics Arthur Wayne Roberts, 1978 Faces of Mathematics Marc Atkins, N. D. Gilbert, 2001 Different Faces of Geometry S. K. Donaldson, Yakov Eliashberg, Mikhael Gromov, 2004-07-21

Different Faces of Geometry edited by the world renowned geometers S Donaldson Ya Eliashberg and M Gromov presents the current state new results original ideas and open questions from the following important topics in modern geometry Amoebas and Tropical Geometry Convex Geometry and Asymptotic Geometric Analysis Differential Topology of 4 Manifolds 3 Dimensional Contact Geometry Floer Homology and Low Dimensional Topology K hler Geometry Lagrangian and Special Lagrangian Submanifolds Refined Seiberg Witten Invariants These apparently diverse topics have a common feature in that they are all areas of exciting current activity The Editors have attracted an impressive array of leading specialists to author chapters for this volume G Mikhalkin USA Canada Russia V D Milman Israel and A A Giannopoulos Greece C LeBrun USA Ko Honda USA P Ozsv th USA and Z Szab USA C Simpson France D Joyce UK and P Seidel USA and S Bauer Germany One can distinguish various themes running through the different contributions There is some emphasis on invariants defined by elliptic equations and their applications in low dimensional topology symplectic and contact geometry Bauer Seidel Ozsv th and Szab These ideas enter more tangentially in the articles of Joyce Honda and LeBrun Here and elsewhere as well as explaining the rapid advances that have been made the articles convey a wonderful sense of the vast areas lying beyond our current understanding Simpson s article emphasizes the need for interesting new constructions in that case of K hler and algebraic manifolds a point which is also made by Bauer in the context of 4 manifolds and the 11 8 conjecture LeBrun s article gives another perspective on 4 manifold theory via Riemannian geometry and the challenging open questions involving the geometry of even well known 4 manifolds There are also striking contrasts between the articles The authors have taken different approaches for example the thoughtful essay of Simpson the new research results of LeBrun and the thorough expositions with homework problems of Honda One can also ponder the differences in the style of mathematics In the articles of Honda Giannopoulos and Milman and Mikhalkin the geometry is present in a very vivid and tangible way combining respectively with topology analysis and algebra The papers of Bauer and Seidel on the other hand makes the point that algebraic and algebro topological abstraction triangulated categories spectra can play an important role in very unexpected ways in concrete geometric problems From the Preface by the Editors Faces Mathematics A.
