## **Facts And Models In Hearing:**

**Psychoacoustics** Eberhard Zwicker, Hugo Fastl, 2013-03-14 Psychoacoustics Facts and Models represents a comprehensive collection of data describing the processing of sound by the human hearing system. It includes quantitative relations between sound stimuli and auditory perception in terms of hearing sensations. In addition, quantitative psychoacoustic models of hearing sensations are given. The monograph contains a unique collection of data on the human hearing system as a receiver of acoustic information as well as many examples of the practical application of the results of basic research in fields such as audiology, noise evaluation, and sound engineering. Many helpful hints for the solution of practical problems will be of particular benefit to engineers, and the book as a whole should serve as an important benchmark in the field of psychoacoustics. The treatment given in this second edition has been thoroughly updated with recent results.

Facts and Models in Hearing Eberhard Zwicker, E. Terhardt, 1974      **Facts and Models in Hearing** E. Zwicker, E. Terhardt, 1974-08-06      *Facts and Models in Hearing* E. Zwicker, E. Terhardt, 2013-03-12 During recent years auditory research has advanced quite rapidly in the area of experimental psychology as well as in that of physiology. Scientists working in both areas have in common the study of the process in HEARING, yet different scientific areas always tend to diverge. A SYMPOSIUM ON PSYCHOPHYSICAL MODELS AND PHYSIOLOGICAL FACTS IN HEARING was organized for the exchange of information and to stimulate discussion between research workers in psychoacoustics, neurophysiology, anatomy, morphology, and hydromechanics. The basic aim of holding this symposium was to halt the divergence and to initiate the kind of multi-disciplinary research that will be needed to elucidate the hearing process as a whole. The present proceedings comprise the papers which were circulated to the participants two months before the symposium and discussed during the symposium together with some comments and additional remarks. These comments and remarks do not, however, represent the full discussions but only the parts available in written form. We have arranged the material in five sections: I Structure and Neurobiology of the Inner Ear, II Cochlear Mechanisms, III Auditory Frequency Analysis, IV Auditory Time Analysis, V Nonlinear Effects. Within the limits of a symposium, none of these topics could be treated comprehensively; moreover, most of the papers concerned problems having several aspects.      Tutzing, 1974.
