Conger, Robert Clark Kedzie, Samuel Johnson, William James Beal, 1888 The Use of Interactive Graphics Processing in
Short-range Terminal Weather Forecasting Donald A. Chisholm, 1983 The products judged most useful in preparing short
range terminal forecasts included 1 a station model time series display 2 conventional geographic data displays presented
simultaneously as four quadrant panels guidance on one screen 3 mesoscale surface objective analyses and 4 a forecast
guidance procedure based on 2 D upper air trajectories and sensible weather algorithms based on imagery from the GOES
satellite The importance of half hourly visible and IR imagery from the GOES satellite in short range terminal forecasting was
confirmed in this experiment The participating forecasters relied more heavily on it to prepare their forecasts than any other
source The manipulation of digital imagery in a computer based interactive graphic system through time series looping color
enhancements and overlaying conventional plots and analyses on it provides a wealth of qualitative and quantitative
guidance for forecasting The numerical forecasts yielded superior rms errors compared to persistence at all forecast
intervals except 1 h At 4 h the improvement over persistence ranged from about 21 percent for wind forecasts to about 34
percent for total cloud amount while the 6 h quantitative precipitation forecasts yielded a 39 percent improvement **Star

Terminal Weather Forecasting** Donald A. Chisholm, 1984 The products judged most useful in preparing short range
terminal forecasts included 1 conventional geographic data displays presented simultaneously as four quadrant panels on
one screen 2 regional scale surface analyses plots and data listings of basic variables 3 satellite based trajectory technique 4
tailored plot displays such as the station model time series display and 5 mapped displays of forecast guidance derived from
the NMC LFM model The importance of half hourly visible and IR imagery from GOES in short range terminal forecasting
was confirmed in this experiment The forecasters relied more heavily on it to prepare their forecasts than any other data
source The manipulation of digital imagery in a computer based interactive graphics system through time series looping
color enhancements and overlaying conventional plots and analyses on it provides a wealth of qualitative and quantitative
guidance for forecasting The numerical forecasts yielded superior rmses compared to persistence for all forecast intervals
and for each forecast element Probability forecasts were substantially better than persistence probability and sample
climatology GEM showed skill relative to persistence probability but yielded larger rmses did persistence in its numerical
form MOS guidance was found to be useful for forecast intervals of 4 hr or longer **A Dictionary of Weather Storm**

Dunlop,2005 An authoritative and comprehensive dictionary of over 1 800 weather forecasting and climate terms with illustrative examples of specific events and extremes Readers can find out fascinating facts such as where and when the world s largest hailstone fell or where the highest temperature was recorded using the list of weather records and check climate data for different weather types from around the world A black and white plate section shows the main cloud types as well as satellite images of weather systems Key terms from the related fields of oceanography hydrology and climatology are also covered This is an essential reference source for meteorology and geography students whether at school or university and for amateur meteorologists
