**Data Visualization and Health Econometrics** Andrew M. Jones, 2017 An Econometric Analysis of OECD Countries Health Expenditure Laura Francia, Lara Gitto, Francesco Saverio Mennini, Barbara Polistena, 2007 Health care expenditure has constituted the main topic of many analysis starting from the pioneering work by Newhouse 1977 that drew attention to the positive relationship between per capita GDP and health spending Later on Gerdtham et al in 1991 have carried out a cross section analysis for a sample of 22 OECD countries analysing the link between health expenditure and GDP The same topic has been recently examined by Hitiris and Posnett 2000 who performed instead a pooled data analysis However as far as we know a more comprehensive econometric analysis aimed at observing determinants and results achieved by OECD countries with regard to health spending over a longer time span has not been performed yet Objectives The present study wants to fill this gap looking at the evolution of health expenditure from 1991 to 2004 This matter results important since the OECD countries have been employing a considerable amount of resources to support their own health systems In 2004 in the OECD countries the health expenditure has reached an average expenditure level equal to the 9.5% of the GDP In particular the health expenditure on the GDP varies from 5.6% in Korea to 15.3% in the United States Methodology Because of the a great heterogeneity among OECD countries due to different health institutions as well as to economic conditions a fixed effects model has been selected for analysis of health care expenditure Results The selection of a fixed effects model has shown to be suitable to represent the observed scenario characterised by national differences in health systems Health expenditure confirms to be highly dependent on the level of per capita GDP as well as on supply represented by number of physicians 1000 and demand represented by occupation of beds 1000 and public financing It has been growing significantly and faster towards the end of the 1990s especially in OECD richer countries and continued its growth till 2004 Such growth led most countries to introduce reforms and measures to cut health expenditure The cost containment policies adopted in OECD countries at the

end of the 1990s do not necessary constitute the best way to address the problem of the financial sustainability of health systems Measures aimed at rationing health care capacity in many countries might produce dissatisfaction with the quality and efficacy of the system in its main users Conclusion The present paper has analysed the determinants of health expenditure in OECD countries A sustainable growth for health expenditure in the next years should not neglect differences across countries further analyses might be directed at investigating the influence of variables related to demand and supply

*Economic Analysis in Health Care* Stephen Morris,Nancy Devlin,David Parkin,2007-06-04 Health economics is concerned with the evaluation of the effectiveness of health care particularly by examining the social opportunity costs of alternative forms of treatment The peculiar nature of the market for health care that doctors have a major influence on both supply and demand has attracted attention as has the study of the options available for financing such services Economic Analysis in Health Care provides a comprehensive coverage of both the economics of health care systems and the evaluation of health care technologies It has been written as a core textbook for advanced undergraduate and postgraduate students with knowledge of economic analysis and will appeal to an international audience Adopts an international perspective using examples and case studies from the UK the rest of Europe and other countries Contains detailed exposition of the economic theory alongside relevant examples and applications Focuses on both market related and economic evaluation aspects of health economics some books focus purely on market related aspects Strong author team with very broad experience of writing and teaching health economics An Introductory Guide to EC Competition Law and Practice Valentine Korah,1994
