Concepts in Cell Biology - History and Evolution Vaidurya Pratap Sahi, František Baluška, 2018-03-01 This book discusses central concepts and theories in cell biology from the ancient past to the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary Strasburger Sachs Schleiden Schwann Mendel Nemeš McClintock etc in the context of the latest advances in plant cell biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast once studied by Sachs or actin observed by Bohumil Nemeš If physics in the form of cell biology has been responsible for one half of this historical development biochemistry has surely been the other

Dinoflagellates David L. Spector, 2012-12-02 The book begins with a general introduction and a taxonomic description of the dinoflagellates both to acquaint those unfamiliar with this group of organisms and to set the tone for the rest of the volume It then addresses the following topics cell biology cell cortex nuclear structure cell cycle and mitosis sexual reproduction cysts and unusual inclusions biochemistry physiology and biochemistry blooms and toxins and biorhythms and genetics In addition a comprehensive chapter on cell culturing provides the reader with an understanding of the growth conditions and requirements of various dinoflagellates and a simple to follow listing of culture media all expressed in similar units for ease of comparison The volume closes with a chapter on evolution which evaluates many of the features of dinoflagellates discussed in the text in terms of evolutionary significance We hope that this treatise will be of use to research workers and students in the area of dinoflagellate biology and in other areas of biology in which dinoflagellates may be used as a model system for studying various biological problems

[Life as We Know It](#) Joseph Seckbach, 2006-09-21 *Life As we Know It* LAKI covers several aspects of Life ranging from the prebiotic level origin of life evolution of prokaryotes to eukaryotes and finally to various affairs of human beings Although it is hard to define Life one can however characterize it and describe its features Topics treated are categories of bacteria algae and fungi conscience philosophy theology aesthetics appearance of sport and life destiny life after clinical death and thoughts of the world to come Olam Haba The various chapters have been written so that they are accessible to all from the avid lay reader to the specialist and make available multidisciplinary sources of information about Life The information presented here on the various phenomena of Life were all

written by highly qualified authors including scientists public leaders a professional athlete and three Nobel Laureates

Biocommunication and Natural Genome Editing Günther Witzany, 2009-10-20 I wrote this book for biologists and those who are interested in both biological affairs in general and perspectives which integrate a large number of specialised biological disciplines The theory of biocommunication presented herein investigates signal transduction processes among cells tissues organs and organisms in bacteria animals corals and bees fungi and plants in the light of the current available empirical data Because life is the central focus of the life sciences this theory will also focus on typical features of life as opposed to inorganic matter Because this field of investigation is based on the methodological primacy of a pragmatic action theory the book may also be of interest to researchers of linguistics communication sciences and sociology e.g. plant sociology animal sociology who would welcome an overview of these highly specialised biological disciplines Current molecular biology as well as cell biology investigates its scientific object by using key terms such as genetic code code without commas misreading of the genetic code coding open reading frame genetic storage medium DNA genetic information genetic alphabet genetic expression messenger RNA cell to cell communication immune response transcription translation nucleic acid language amino acid language recognition sequences recognition sites protein coding sequences repeat sequences signalling signal transduction signalling codes signalling pathways etc

Encyclopedia of Evolution Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe Encyclopedia of Evolution contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists working

within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin's Origin of Species which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe

Science as a Way of Knowing--cell and Molecular Biology, 1989

The Hierarchy of Life Bo Fernholm, Kåre Bremer, Hans Jörnvall, 1989 The goal of the symposium on which these proceedings are based was to reach a consensus on the hierarchy of life In some well studied areas there is a good agreement between molecular data and morphology for example among vertebrates and insects In other well studied groups such as birds and bacteria fundamental disagreements reported in these proceedings may result from the use and interpretation of different methods All these points were discussed during the meeting and several problem areas were also identified resulting in new ideas and plans for future work in this field
