Astral Sciences in Early Imperial China Daniel Patrick Morgan,2017-08-03 Challenging monolithic modern narratives about Chinese science Daniel Patrick Morgan examines the astral sciences in China c 221 BCE 750 CE as a study in the disunities of scientific cultures and the narratives by which ancients and moderns alike have fought to instil them with a sense of unity The book focuses on four unifying legends recounted by contemporary subjects the first two redolent of antiquity are the observing of signs and granting of seasons by ancient sage kings and the other two redolent of modernity involve the pursuit of accuracy and historical accumulation to this end Juxtaposing legend with the messy realities of practice Morgan reveals how such narratives were told imagined and re imagined in response to evolving tensions He argues that whether or not empiricism and progress are real we must consider the real effects of such narratives as believed in and acted upon in the history of astronomy in China
