Global Properties of Linear Ordinary Differential Equations Frantisek Neuman, 1991 This volume presents an authoritative unified overview of the methods and results concerning the global properties of linear differential equations of order $n \geq 2$ It does not however seek to be comprehensive Rather it contains a selection of results which richly illustrate the unified approach presented By making use of recent methods and results from many different areas of mathematics and by introducing several original methods global solutions of problems previously studied only locally are given The structure of global transformations is described algebraically and a new geometrical approach is introduced which leads to global canonical forms suitable for Cartan's moving frame of reference method The theory discussed also provides effective tools for solving some open problems especially relating to the distribution of zeros of solutions In addition the theory of functional equations plays an important role in studying the asymptotic behaviour of solutions Applications to differential geometry and

functional equations are also described The volume is largely self contained This book is for mathematicians computer scientists physicists chemists engineers and others whose work involves the use of linear differential equations

Globalistics and globalization studies Leonid E. Grinin,Ilya V. Ilyin,Peter Herrmann,Andrey V. Korotayev,2016-01-01
The present volume is the fifth in the series of yearbooks with the title Globalistics and Globalization Studies The subtitle of the present volume is Global Transformations and Global Future We become more and more accustomed to think globally and to see global processes And our future can all means be global However is this statement justified Indeed in recent years many have begun to claim that globalization has stalled that we are rather dealing with the process of anti globalization Will not we find ourselves at some point again in an edifice spanning across the globe but divided into national apartments separated by walls of high tariffs and mutual suspicion Of course some setbacks are always possible because the process of globalization cannot develop smoothly It is a process which is itself emerging from contradictions and is shaped by a new contradiction They often go much further than underlying systemic changes allow They break forward as the vanguard of a victorious army and then often meet resistance of various social and political forces and may suddenly start to roll back just at the moment when everyone expects their further offensive We believe that this is what is happening with globalization at present The yearbook will be interesting to a wide range of researchers teachers students and all those who are concerned about global issues
