Efficient Visual Recognition Using The Hausdorff Distance:

Efficient Visual Recognition Using the Hausdorff Distance William Rucklidge,1996-11-06 This book presents the theoretical aspects and practical development of a computer vision system for searching an image for a specified model object this system is reliable tolerates imperfections in the image and model and is fast enough for real world applications A number of search techniques are evaluated The capabilities of the author s image search system are demonstrated on a variety of examples and applications using it to track moving objects and navigate mobile robots are shown This book is essential reading for anybody interested in model based object recognition **Efficient Computation of the Minimum Hausdorff Distance for Visual Recognition** William James Rucklidge,1995 Theory, Algorithms, and Experiments in Applied Optimization Boris Goldengorin,2025-12-04 This book celebrates the remarkable contributions of Panos M Pardalos offering a comprehensive collection of 19 rigorously peer reviewed articles that span the breadth of his research interests From deterministic and stochastic global optimization to combinatorial optimization this volume provides insights into solving modern applied problems in planning theory support vector machines data mining supply chain optimization and more Readers will encounter a diverse array of topics including Pareto optimality game and equilibrium theory vehicle routing problems energy systems and financial markets Each article stands alone in its scientific methodological and practical individuality making this collection a must read for both junior university students and seasoned professionals The contributing authors many of whom are former students and now esteemed professors offer unique perspectives and cutting edge research findings This book is an invaluable resource for researchers academics and practitioners in fields such as operations research resource management computer science and data analysis Whether you are taking your first steps in optimization or are an advanced professional seeking to deepen your understanding this volume provides the tools and insights necessary to navigate the complex landscape of applied optimization problems Distances and Similarities in Intuitionistic Fuzzy Sets Eulalia Szmidt,2013-07-23 This book presents the state of the art in theory and practice regarding similarity and distance measures for intuitionistic fuzzy sets Quantifying similarity and distances is crucial for many applications e g data mining machine learning decision making and control The work provides readers with a comprehensive set of theoretical concepts and practical tools for both defining and determining similarity between intuitionistic fuzzy sets It describes an automatic algorithm for deriving intuitionistic fuzzy sets from data which can aid in the analysis of information in large databases The book also discusses other important applications e g the use of similarity measures to evaluate the extent of agreement between experts in the context of decision making **Integrated Image and Graphics Technologies** David D. Zhang,Mohamed Kamel,George Baciu,2006-04-18 Integrated Image and Graphics Technologies attempts to enhance the access points to both introductory and advanced material in this area and to facilitate the reader with a comprehensive reference for the study of integrated technologies systems of image and graphics conveniently and effectively This edited

volume will provide a collection of fifteen contributed chapters by experts containing tutorial articles and new material describing in a unified way the basic concepts theories characteristic features of the technology and the integration of image and graphics technologies with recent developments and significant applications **Advances in Visual Information Systems** Robert Laurini,2003-07-31 Presently in our world visual information dominates The turn of the millenium marks the age of visual information systems Enabled by picture sensors of all kinds turning digital visual information will not only enhance the value of existing information it will also open up a new horizon of previously untapped information sources There is a huge demand for visual information access from the consumer As well the handling of visual information is boosted by the rapid increase of hardware and Internet capabilities Advanced technology for visual information systems is more urgently needed than ever before not only new computational methods to retrieve index compress and uncover pictorial information but also new metaphors to organize user interfaces Also new ideas and algorithms are needed which allow access to very large databases of digital pictures and videos Finally we should not forget new systems with visual interfaces integrating the above components into new types of image video or multimedia databases and hyperdocuments All of these technologies will enable the construction of systems that are radically different from conventional information systems Many novel issues will need to be addressed query formulation for pictorial information consistency management thereof indexing and assessing the quality of these systems Historically the expression Visual Information Systems can be understood either as a system for image information or as visual system for any kind information **Advances in Swarm Intelligence** Ying Tan,Yuhui Shi,Zhen Ji,2012-06-13 This book and its companion volume LNCS vols 7331 and 7332 constitute the Proceedings of the Third International conference on Swarm Intelligence ICSI 2012 held in Shenzhen China in June 2012 The 145 full papers presented were carefully reviewed and selected from 247 submissions The papers are organized in 27 cohesive sections covering all major topics of swarm intelligence research and developments **Multisensor Fusion** Anthony K. Hyder,E. Shahbazian,E. Waltz,2012-12-06 For some time all branches of the military have used a wide range of sensors to provide data for many purposes including surveillance reconnoitring target detection and battle damage assessment Many nations have also attempted to utilise these sensors for civilian applications such as crop monitoring agricultural disease tracking environmental diagnostics cartography ocean temperature profiling urban planning and the characterisation of the Ozone Hole above Antarctica The recent convergence of several important technologies has made possible new advanced high performance sensor based applications relying on the near simultaneous fusion of data from an ensemble of different types of sensors The book examines the underlying principles of sensor operation and data fusion the techniques and technologies that enable the process including the operation of fusion engines Fundamental theory and the enabling technologies of data fusion are presented in a systematic and accessible manner Applications are discussed in the areas of medicine meteorology BDA and targeting transportation cartography the environment agriculture and manufacturing and
