

### Activity: An Introduction

Students demonstrate an understanding of compound probability through simple events based on the outcomes of two dice. This is done by using the principle of independence. The set of outcomes for the two dice is the Cartesian product of the sets of outcomes for each die. The principle of independence states that the probability of two events occurring together is the product of the probabilities of each event occurring. This principle is used to find the probability of two events occurring together. The principle of independence is used to find the probability of two events occurring together. The principle of independence is used to find the probability of two events occurring together. The principle of independence is used to find the probability of two events occurring together.

Students demonstrate an understanding of compound probability through simple events based on the outcomes of two dice. This is done by using the principle of independence. The set of outcomes for the two dice is the Cartesian product of the sets of outcomes for each die. The principle of independence states that the probability of two events occurring together is the product of the probabilities of each event occurring. This principle is used to find the probability of two events occurring together. The principle of independence is used to find the probability of two events occurring together. The principle of independence is used to find the probability of two events occurring together.

#### Example 1: Two dice

Two dice are rolled. Find the probability of rolling a 2 and a 3.

#### Example 2: Two dice

Two dice are rolled. Find the probability of rolling a 2 and a 2.

#### Example 3: Two dice

Two dice are rolled. Find the probability of rolling a 2 and a 6.

#### Example 4: Two dice

Two dice are rolled. Find the probability of rolling a 2 and a 2, or a 3 and a 3.

# Elasticity An Introduction Lesson 4 Activity 17
