The Elastic Book of Numbers Allen Ashley, 2005-09 **The Physical Review**, 1896 **Journal of Anatomy and Physiology**, 1906 The Optimal Homotopy Asymptotic Method Vasile Marinca, Nicolae Herisanu, 2015-04-02 This book emphasizes in detail the applicability of the Optimal Homotopy Asymptotic Method to various engineering problems. It is a continuation of the book *Nonlinear Dynamical Systems in Engineering: Some Approximate Approaches* published at Springer in 2011 and it contains a great amount of practical models from various fields of engineering such as classical and fluid mechanics, thermodynamics, nonlinear oscillations, electrical machines, and so on. The main structure of the book consists of 5 chapters. The first chapter is introductory while the second chapter is devoted to a short history of the development of homotopy methods including the basic ideas of the Optimal Homotopy Asymptotic Method. The last three chapters from Chapter 3 to Chapter 5 are introducing three distinct alternatives of the Optimal Homotopy Asymptotic Method with illustrative applications to nonlinear dynamical systems. The third chapter deals with the first alternative of our approach with two iterations. Five applications are presented from fluid mechanics and nonlinear oscillations. The Chapter 4 presents the Optimal Homotopy Asymptotic Method with a single iteration and solving the linear equation on the first approximation. Here are treated 32 models from different fields of engineering such as fluid mechanics, thermodynamics, nonlinear damped and undamped oscillations, electrical machines, and even from physics and biology. The last chapter is devoted to the Optimal Homotopy Asymptotic Method with a single iteration but without solving the equation in the first approximation.

The authors take on a unique approach to involve the readers in formal conversations between Karen postgraduate and other researchers at a research event held in 2017 at Cape Town, South Africa. It features chapters that have been contributed by seminar delegates and organisers which put forth the continuing impact that Karen Barad has had on their empirical work, research writing, and drawing practices. The text further discusses the ethical and political significance of Karen's work especially in the context of decolonizing South African higher education. The chapters offer a series of worked posthumanist pedagogical examples and describe how a research seminar was organised differently and more in line with Baradian radical philosophy. At its heart, this book makes a methodological and pedagogical contribution to the surge in literature on agential realism whilst simultaneously challenging dominant research binaries and arguing for a more egalitarian way of working together in knowledge creation by troubling human and more than human hierarchies. The book's uniqueness is further fortified through its description of formal conversations which are diffracted through chapters a doing of agential realism.
