

Meromorphic Function

A meromorphic function is a **single-valued function** that is **analytic** in all but possibly a discrete subset of its **domain**, and at those **singularities** it must go to infinity like a **polynomial** (i.e., these exceptional points must be **poles** and not **essential singularities**). A simpler definition states that a meromorphic function is a function $f(z)$ of the form

$$f(z) = \frac{g(z)}{h(z)}$$

where $g(z)$ and $h(z)$ are **entire functions** with $h(z) \neq 0$ (Krantz 1999, p. 64).

A meromorphic function therefore may only have finite-order, isolated **poles** and zeros and no **essential singularities** in its **domain**. A meromorphic function with an infinite number of poles is exemplified by $\csc(1/z)$ on the **punctured disk** $U = D \setminus \{0\}$, where D is the open unit disk.

An equivalent definition of a meromorphic function is a complex analytic **map** to the **Riemann sphere**

Entire And Meromorphic Functions
