Iterative Identification and Control P. Albertos Pérez, Doctor Antonio Sala, 2002-05-21 An exposition of the interplay between the modelling of dynamic systems and the design of feedback controllers based on these models The authors of individual chapters are some of the most renowned and authoritative figures in the fields of system identification and control design

*Identification and Control* Ricardo S. Sánchez-Peña, Joseba Quevedo Casín, Vicenç Puig Cayuela, 2007-06-28 This book meets head on the difficulty of making practical use of new systems theory presenting a selection of varied applications together with relevant theory It shows how workable identification and control solutions can be derived by adapting and extrapolating from the theory Each chapter has a common structure a brief presentation of theory the description of a particular application experimental results and a section highlighting explaining and laying out solutions to the discrepancy between the theoretical and the practical

Taming Heterogeneity and Complexity of Embedded Control Françoise Lamnabhi-Lagarrigu, Antonio Loria, Elena Panteley, Salah Laghrouche, 2013-05-21 This book gathers together a selection of papers presented at the Joint CTS HYCON Workshop on Nonlinear and Hybrid Control held at the Paris Sorbonne France 10 12 July 2006 The main objective of the Workshop was to promote the exchange of ideas and experiences and reinforce scientific contacts in the large multidisciplinary area of the control of nonlinear and hybrid systems

**System Identification 2003** Paul Van Den Hof, Bo Wahlberg, Siep Weiland, 2004-06-29 The scope of the symposium covers all major aspects of system identification experimental modelling signal processing and adaptive control ranging from theoretical methodological and scientific developments to a large variety of engineering application areas It is the intention of the organizers to promote SYSID 2003 as a meeting place where scientists and engineers from several research communities can meet to discuss issues related to these areas Relevant topics for the symposium program include Identification of linear and multivariable systems identification of nonlinear systems including neural networks identification of hybrid and distributed systems Identification for control experimental modelling in process control vibration and modal analysis model validation monitoring and fault detection signal processing and communication parameter estimation and inverse modelling statistical analysis and uncertainty bounding adaptive control and data based controller tuning learning data mining and Bayesian approaches sequential Monte Carlo methods including particle filtering applications in process control systems motion control systems robotics aerospace systems bioengineering and medical systems physical measurement systems automotive systems econometrics transportation and communication systems Provides the latest research on System Identification Contains contributions written by experts in the field Part of the IFAC Proceedings Series which provides a comprehensive overview of the major topics in control engineering
