Synthesizing Systems

Anna Darden Copeland, 2007-02-22 The purpose of this dissertation is to introduce a general reading audience to the major themes found in the fiction of Richard Powers with an emphasis on his use of science For Powers science is something more than the accumulation of technical data and the proliferation of theories developed to explain physical phenomena It is an evolving body of knowledge which has important insights to contribute into the conditions which ground human experience The close and often detailed discussions of contemporary issues in science which Powers incorporates into his fiction indicate the extent to which he sees science as an inseparable component in any attempt to understand the complexities of human experience The common ground Powers uses to link the interests of science and those of fiction into a balanced if not always harmonious pursuit of truth is wonder The limitations placed on science during this century do not undermine the ability of science to influence what we can know Nor do these limitations diminish the ability of science to inspire wonder Quite the opposite For Powers the true wonder of the human intellect rests in our remarkable ability to balance observation and interpretation What he discovers again and again in his fiction is that science like literature is a product of the human imagination a way to mediate between the world and our perceptions of it The recognition that science is a cultural practice a body of knowledge thoroughly imbued with the practices and prejudices of its historical surroundings is a necessary first step in mending the rift separating science and literature head and heart The greatest insight of twentieth century science may just be the recognition that there are other ways to access the truth Richard Powers skillful weaving of science and art is a testament that literature offers a unique vantage point from which we might learn something of value about ourselves and the world we inhabit

J.S. Bach's Goldberg Variations as a Response to Newton's Queries from the Optice (1719)

Maximillian Myers Schmeder, 2005 *Wild Science* Janine Marchessault, Kim Sawchuk, 2013-10-18 *Wild Science* investigates the world wide boom in health culture While self help health books and medical dramas are popular around the globe we are bombarded with daily media images of DNA research and news reports about cloning the fight against AIDS cancer and depression With popular culture now the principal means through which the non scientific population encounters science why do certain images of science get promoted above others Contributors examine the public meanings of science revealing the frictions and contradictions within popular representations of what medicine can and should do Focusing on the visual culture of medicine they show how representations of science have a direct impact on popular perceptions of the limits of

science and ultimately on health education funding and research and examine the belief that media literacy in popular representations of medicine makes an ethical public discourse on the aims of science possible With sections addressing the new visual technologies which make the human body into a virtual territory the diagnostic and medical practices centered around women s bodies and popular debates around genetics and identity Wild Science argues that science is a practice bound in values and institutions and argues for a responsible engagement with the public cultures of science and health

Goldbug Variations Powers,1994-03-01 **Reinventing Bach** Paul Elie,2012-09-18 The story of a revolution in music and technology told through a century of recordings of the music of Johann Sebastian Bach In Reinventing Bach his remarkable second book Paul Elie tells the electrifying story of how musicians of genius have made Bach s music new in our time at once restoring Bach as a universally revered composer and revolutionizing the ways that music figures into our lives As a musician in eighteenth century Germany Bach was on the technological frontier restoring organs inventing instruments and perfecting the tuning system still in use today Two centuries later pioneering musicians began to take advantage of breakthroughs in audio recording to make Bach s music the sound of modern transcendence The sainted organist Albert Schweitzer played to a mobile recording unit set up at London s Church of All Hallows in order to spread Bach s organ works to the world beyond the churches Pablo Casals recording at Abbey Road Studios made Bach s cello suites existentialism for the living room Leopold Stokowski and Walt Disney with Fantasia made Bach the sound of children s playtime and Hollywood grandeur alike Glenn Gould s Goldberg Variations opened and closed the LP era and made Bach the byword for postwar cool and Yo Yo Ma has brought Bach into the digital present where computers and smartphones put the sound of Bach all around us In this book we see these musicians and dozens of others searching experimenting and collaborating with one another in the service of Bach who emerges as the very image of the spiritualized technically savvy artist Reinventing Bach is a gorgeously written story of music invention and human passion and a story with special relevance in our time for it shows that great things can happen when high art meets new technology **The Gold Bug Variations** Richard

Powers,2025-06-12 A love story of charm and substance brimming over with ideas yet anchored in emotional truth SUNDAY TELEGRAPH Powers has triumphantly restored the philosophical novel OBSERVER A heroic tour de force NEW YORK TIMES In 1957 brilliant biologist Stuart Ressler sets out to crack the genetic code Yet his efforts are sidetracked by other more complex codes social moral musical and spiritual as he falls in love with a member of his research team Years later another young man and woman investigate a different mystery why did the promising Ressler suddenly vanish from the world of science Strand by strand these two love stories intertwine in a double helix of desire in an enthralling tale about new love and the mysteries of science **Warring Fictions** Jim Neilson,1998 Although the Vietnam conflict ended two decades ago a fierce cultural war over how its literature is to be perceived continues to be waged Warring Fictions accuses American critics of twenty years of whitewash and reminds us that Vietnam was not just an American anguish and its fiction a rock and roll

acid trip From the blind patriotism of *The Green Berets* to the postmodern hip of *Dispatches* this book brings history and politics back to the Vietnam War novel It is a brilliant case study of canon formation and of the role commercial and academic literary institutions have played in assessing Vietnam War fiction it exposes their complicity in the writing of recent American history and rebukes academic literary culture that speciously purports a radical calling for itself Beyond an academic audience this book will challenge all who are piqued by studies of the war and of Vietnam War fiction And it raises important questions about the interlocking interests and ideologies of literary culture the publishing industry the mass media and the academy With its exemplary command of actual history and its well documented investigation of the Vietnam fiction canon this book throws a probing light on a literary culture whose tastes and attitudes have helped enforce a conservative interpretation of the war In extraordinary readings of *The Quiet American* *The Ugly American* *The Prisoners of Quai Dong* *The Laotian Fragments* *Dispatches* *The Things They Carried* and *In Country* Warring Fictions provides a radical historical perspective on the fiction that emerged from the Vietnam War

Walking the Möbius Strip Johanna Heil, 2016 *Walking the Möbius Strip* locates Richard Powers's fiction at the crossroads of postmodern and post postmodern aesthetics and argues that this paradigm shift shapes the models of knowledge and understanding that underwrite his work The readings of *Plowing the Dark* *Galatea 2.2* and *The Echo Maker* are inspired by Jacques Lacan's image of cognition as a Möbius strip on which different forms of propositional and non propositional knowledge bleed into and depend upon one another Drawing on feminist epistemology and psychoanalysis this study highlights Powers's interest in the non propositional aspects of cognition that is in all that escapes the frameworks of scientific empiricism and can only be known through the mediation of fictional narrative It reveals a deep dissatisfaction in the novels with the suggestion that knowledge and understanding must be objective and rational and elucidates Powers's idea that fiction can be a powerful tool for integrating various kinds of knowledge
