John Richard Shanebrook

First Atomic Bomb:

Hiroshima Clive Lawton, 2004 Provides an historical account of the events surrounding the bombings of Hiroshima and Nagasaki in 1945 during World War II discussing the long term repercussions and the overall results from a military standpoint

Fire in the Sky Jeffrey K. Smith, 2010-03 In the summer of 1945 the world was introduced to the horrific consequences of nuclear warfare On the sixth day of August an American B 29 bomber dropped a revolutionary new weapon the atomic bomb over the Japanese city of Hiroshima The catastrophic detonation instantly killed over 100 000 residents of the city with thousands more dying from explosion related injuries in the months and years to follow Three days later a second nuclear weapon was released over the skies of Nagasaki killing over 40 000 Japanese citizens most of whom were civilians Six days after the second nuclear attack the Empire of Japan surrendered and World War II was ended Jubilation among the Allied countries was tempered by a profound sense of relief nearly four years of bloody war had finally come to an end Some 406 000 Americans died during World War II while another 671 000 were wounded By the end of the war an astonishing one out of every one hundred thirty six Americans had been killed or wounded in the fighting American military personnel along with their spouses children parents and friends were eager to see the bloody conflict come to an end by any means possible Consequently President Harry Truman s decision to utilize the atomic bomb to bring Japan to its knees was wildly popular in the weeks and months that followed the Japanese surrender In the six plus decades since Hiroshima and Nagasaki however many have questioned both the necessity and morality of America s deployment of the bomb Significantly influenced by revisionist history passionate debate has focused on the justification for nuclear warfare to subdue an enemy already nearing defeat Like so many other momentous events the reader must balance the reality of the world in 1945 against the seemingly clearer prism of revisionist history

Fire in the Sky The Story of the Atomic Bomb chronicles the development and use of the first atomic bombs This is a remarkable story about the lives and times of the brilliant scientists seasoned military officers and determined government leaders who reshaped history and irrevocably changed the dynamics of warfare

The Atomic Bomb: A History Just For Kids! KidCaps, 2013-09-05 Now from time to time you might hear the term nuclear bomb used while other times you may hear the term atomic bomb What is the difference Any bomb that uses tiny reactions inside the nucleus of a microscopic atom is by definition a nuclear bomb However the first nuclear bombs were much simpler than today s bombs which use multiple steps to produce their large explosions The first nuclear bombs that were produced relied only on this special microscopic reaction in the atom and so are called atomic bombs and it is this kind that we will be talking about Find out about this exciting and complex period of time in this kid s book

[The First Atomic Bomb](#) Jim Mangi, 2022-06-20 While German and Japanese scientists also labored unsuccessfully to create an atomic bomb by the summer of 1945 the American led team was ready to test its first weapon As the clock ticked down to the detonation time of 05 30 hours on 16 July 1945 the nervous team of technicians and scientists waited ten miles away from Ground Zero deep

in the New Mexico desert No one knew how powerful the explosion would be or whether even at such a distance they would be safe from the blast Even so some chose to observe the detonation from a point four miles nearer at the control bunker but then no one was even sure that the bomb would work What if that is actually what happened Under schedule pressure from the White House the scientists assembled the device in part with tape and tissue paper knowing some components were flawed These are verifiable facts It means that as many of those who gathered in the New Mexico desert feared at the time the bomb might not have worked during that first test In *The First Atomic Bomb* Jim Mangi explores what might happened in the event that the world's first atomic bomb had not been ready for use when it was How would this have affected the end of the war in the Pacific and indeed the Second World War as a whole Would Emperor Hirohito's armed forces have battled on When might Colonel Paul W Tibbets at the controls of his Boeing B 29 Superfortress Enola Gay have then made his historic flight over Hiroshima and would that city even have remained the target How would Stalin and the Soviets have reacted to such developments and how would this have played out in the post war world [The First Atomic Bomb](#) Janet Farrell Brodie,2023-06 2024 Southwest Book of the Year On July 16 1945 just weeks before the atomic bombing of Hiroshima and Nagasaki that brought about the surrender of Japan and the end of World War II the United States unleashed the world's first atomic bomb at the Trinity testing site located in the remote Tularosa Valley in south central New Mexico Immensely more powerful than any weapon the world had seen the bomb's effects on the surrounding and downwind communities of plants animals birds and humans have lasted decades In *The First Atomic Bomb* Janet Farrell Brodie explores the history of the Trinity test and those whose contributions have rarely if ever been discussed the men and women who constructed served and witnessed the first test as well as the downwinders who suffered the consequences of the radiation Concentrating on these ordinary people laborers ranchers and Indigenous peoples who lived in the region and participated in the testing Brodie corrects the lack of coverage in existing scholarship on the essential details and everyday experiences of this globally significant event *The First Atomic Bomb* also covers the environmental preservation of the Trinity test site and compares it with the wide range of atomic sites now preserved independently or as part of the new Manhattan Project National Historical Park Although the Trinity site became a significant node for testing the new weapons of the postwar United States it is known today as an officially designated National Historic Landmark Brodie presents a timely important and innovative study of an explosion that carries special historical weight in American memory **Hiroshima** 50minutes,2017-03-01 Keen to learn but short on time Get to grips with the events surrounding the bombing of Hiroshima in next to no time with this concise guide 50Minutes.com provides a clear and engaging analysis of the bombing of Hiroshima In August 1945 the Second World War was over in Europe but in the East the Japanese army refused to surrender Fearing a bloody battle if they invaded Japan the US military and political leaders decided to use their recently developed nuclear weapons to force Japan's hand These bombs proved more devastating than anyone could have imagined and their use played a significant part in the

Kelly,2020-07-07 On the seventy fifth anniversary of the first atomic bomb discover new reflections on the Manhattan Project from President Barack Obama hibakusha survivors and the modern day mayors of Hiroshima and Nagasaki The creation of the atomic bomb during World War II codenamed the Manhattan Project was one of the most significant and clandestine scientific undertakings of the 20th century It forever changed the nature of war and cast a shadow over civilization Born out of a small research program that began in 1939 the Manhattan Project would eventually employ nearly 600 000 people and cost about 2 billion 28 5 billion in 2020 all while operating under a shroud of complete secrecy On the 75th anniversary of this profoundly crucial moment in history this newest edition of The Manhattan Project is updated with writings and reflections from the past decade and a half This groundbreaking collection of essays articles documents and excerpts from histories biographies plays novels letters and oral histories remains the most comprehensive collection of primary source material of the atomic bomb **The Los Alamos Primer** Robert Serber,2020-04-07 More than seventy years ago American forces exploded the first atomic bombs over the Japanese cities of Hiroshima and Nagasaki causing great physical and human destruction The young scientists at Los Alamos who developed the bombs which were nicknamed Little Boy and Fat Man

were introduced to the basic principles and goals of the project in March 1943 at a crash course in new weapons technology. The lecturer was physicist Robert Serber. J. Robert Oppenheimer's protégé and the scientists learned that their job was to design and build the world's first atomic bombs. Notes on Serber's lectures were gathered into a mimeographed document titled *The Los Alamos Primer* which was supplied to all incoming scientific staff. The *Primer* remained classified for decades after the war. Published for the first time in 1992, the *Primer* offers contemporary readers a better understanding of the origins of nuclear weapons. Serber's preface vividly conveys the mingled excitement, uncertainty, and intensity felt by the Manhattan Project scientists. This edition includes an updated introduction by Pulitzer Prize-winning historian Richard Rhodes. A seminal publication on a turning point in human history, *The Los Alamos Primer* reveals just how much was known and how terrifyingly much was unknown midway through the Manhattan Project. No other seminar anywhere has had greater historical consequences.

Birthplace of the Atomic Bomb William S. Loring, 2019-03-08. It was not Robert Oppenheimer who built the bomb; it was engineers, chemists, and young physicists in their twenties, many not yet having earned a degree. The first atomic bomb was originally conceived as a backup device, a weapon not then currently achievable. The remote Trinity Site, the birthplace of the bomb, was used as a test range for U.S. bombers before the first nuclear device was secretly detonated. After the blast, locals speculated that the flash and rumble were caused by colliding B-29s, while Manhattan Project officials nervously measured high levels of offsite radiation. Drawing on original documents, many recently declassified, the author sheds new light on a pivotal moment in history now approaching its 75th anniversary, told from the point of view of the men who inaugurated the Atomic Age in the New Mexico desert.

The Making of the Atom Bomb Victoria Sherrow, 2000. Discusses various topics connected to the production of the atom bomb, including the development of nuclear energy, work on atomic weapons at the Los Alamos and other sites, and the decision to use the first atomic bomb during World War II.

[The History of Nuclear War I](#) John Richard Shanebrook, 2013-10-24. In August of 1945, some 200,000 people died at Hiroshima and Nagasaki from two nuclear weapon explosions during Nuclear War I. This book details the following historical events that led to Nuclear War I: Fermi and Szilard worked on nuclear fission at Columbia University in 1939; Plutonium-239 was discovered in 1940; Einstein informed President Roosevelt of possible German uranium bombs; Fermi built the world's first nuclear reactor in 1942 to manufacture plutonium; General Groves and Oppenheimer led the U.S. effort to build atomic bombs as part of the Manhattan Project; Soviet spies infiltrated the Manhattan Project; The Trinity Test on July 16, 1945, was the world's first nuclear explosion; The Pope, 1943, and many scientists spoke against the use of nuclear weapons; Truman became President on April 12, 1945, and first learned of the Manhattan Project; The B-29 bomber was selected to deliver atomic bombs to Japan; On August 6, 1945, an atomic bomb (uranium) was exploded over the Japanese city of Hiroshima. For three days (August 6th to the 9th), hope abounded that Japan would surrender, but preparations for more nuclear war continued. On August 9, 1945, an atomic bomb (plutonium) was exploded over the Japanese city of Nagasaki. Emperor Hirohito survived a coup by angry military

officers and Japan surrendered on August 14 1945 **The Atomic Bomb** Jennifer Fandel,2007-07 Examines the development of the first atomic bombs and profiles J Robert Oppenheimer the director of the Manhattan Project *Trinity* Los Alamos Scientific Laboratory,U. S. Government,2017-09-18 The history of the world s first atomic explosion on July 16 1945 at the Trinity test site in southern New Mexico is covered in this unique compilation of reports and publications The report of the Los Alamos Scientific Laboratory provides a comprehensive record of the atom bomb test other publications reveal secrets of the test site The introduction of the report states Preparations for the Trinity test were started in March 1944 and culminated in a 100 ton rehearsal shot on May 7 1945 and the final gadget test shot on July 16 1945 The purposes of this report are To put on record the development scope and type of operations involved in the July 16 1945 atomic bomb test with recommendations for future operating procedure to collect in one place all the reports relating to the apparatus and results planning and administration A test of the atomic bomb was considered essential by the Director and most of the group and division leaders of the Laboratory because of the enormous step from the differential and integral experiments and theory to a practical gadget No one was content that the first trial of a Fat Man F M gadget should be over enemy territory where if the gadget failed the surprise factor would be lost and the enemy might be presented with a large amount of active material in recoverable form The only thing that could finally settle the many questions current before the test was an actual experiment with full instrumentation Plans were made for yields from 100 10000 tons with the most probable value 4000 tons July 10 1945 The safety of personnel and structures was insured for yields as great as 200000 tons The final functioning of the bomb showed that the prior work had been excellent in every respect and no vital factor had been overlooked In the winter and spring of 1944 the possibility that the first test bomb would not work at all was constantly in mind Discussions had been held between S Neddermeyer G B Kistiakowsky J R Oppenheimer and others to consider the construction of a large pressure vessel that would be able to contain the active material and products of the explosion of a high explosive if the operation of the first atomic bomb should be a complete fizzle The need for the containing vessel was based on the uncertainties of the behaviour of the bomb and the desirability of conserving active material Contents include CALIBRATION AND REHEARSAL SHOT Plan and Organization Firing of 100 Ton Shot Results of the 100 Ton Shot Report on First Trinity Test Purpose of Test General Character of the Test Program of Measurement and Observation Organization for Carrying Out the Program Behaviour of the Implosion Nuclear Energy Released Damage Effects Produced Overall Behaviour of the Explosion and Its After Effects Meteorological Observations Health Control Conclusion Post 100 Ton Suggestions For Improved Facilities and Procedure Suggestions for Improvements Conclusions Concerning the 100 Ton Test PREPARATIONS FOR THE JULY 16 TEST Coordination of Preparations Consultants Weekly Meetings Acceptance of New Experiments Prompt Dissemination of General Information Coordination of Construction FINAL PREPARATIONS FOR REHEARSALS AND TEST Schedule Timing and Wiring Layout Electronics Shelter Chiefs Arming Party Location and Time of Shot Protection Against
