**Advances in Solar Physics Euroconference** ,1997 *Sun-Earth Plasma Connections* James L. Burch, Robert L. Carovillano, Spiro K. Antiochos, 1999-01-26 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 109 The Sun and the terrestrial magnetosphere have been the subjects of active research since the dawn of the space age The capabilities of observing both systems with greater and greater detail evolved separately until the 1980s when it was realized that definitive results on the connection between the Earth and the Sun would require a concerted and joint effort It was also realized that sophisticated solar terrestrial research communities existed within all the space faring nations of the world and that no one of them could launch such an effort by itself This realization led to the creation of the International Solar Terrestrial Physics ISTP program which now comprises at least 12 spacecraft and includes extensive ground based observations and theory and modeling efforts
