

# Metaphysics

---

Metaphysics is a branch in philosophy that primarily concerns with defining reality, nature of things which exist, and abstract concepts like time, space, being, identity etc. The first ever mention of metaphysics was in Aristotle's book *Ta meta ta physika*, which translates to "after the Physics". This book deals with the study of being, questions about reality and existence. However, modern metaphysics is a much broader concept than what was earlier defined. Many ideas in metaphysics can sometimes contradict modern concepts of sciences. Due to this conflict between ideas often rises. However, metaphysics of nature and science can inspire scientific inquisitions particularly in fields of quantum physics and cosmology. Metaphysical ideas try to define a reality outside of our understanding and experiences. They raise questions about life and beyond. Only through constant questions about truth of this world, new innovations and discoveries can occur. There are different fields of metaphysical studies that include cosmology, ontology and epistemology.

Cosmology is defined as the study of the universe. It is considered a major branch metaphysics as it seeks answers to the truth of the universe. Cosmology is also considered to be a part of astrophysics and astronomy. Ontology refers to the understanding of being, and the nature of the world. Ontology can be used in many modern sciences such as information science, computational technology business and scientific research. Epistemology is the branch of metaphysics which deals with the studying of knowledge, its origins and limits. It has widespread applications in scientific research and data acquisition. The core concept of science is to learn and understand truths of the world. Through experimentation and studies we seek to increase our knowledge and understanding of the world. Only through constant questions of the reality and truth of the universe, these scientific inquisitions can be possible. This in fact is the sole reason why metaphysics plays an important part in all branches of science and research and will continue to do so in future.
