A. Arockia Bazil Raj, 2015-12-18 Recent progress in ICT has exceeded our expectations for meeting the requirement of multimedia society in the 21st century The FSOC is considered to be one of the key technologies for realizing very high speed multi Gbps large capacity terrestrial and aerospace communications In FSOC the optical beam propagation in the turbulent atmosphere is severely affected by various factors suspended in the channel Wavefront aberration correcting with continuous beam alignment are the key requirements for a successful installation of an FSOC system which are the main contributions in our book Establishment of FSOC setups development of accurate weather station measurement of atmospheric attenuation Att and turbulence strength Cn2 development of new models to predict the Att and Cn2 design of Response Surface Model and Artificial Neural Network based on controller implementation of neural controller in FPGA and attaining the BER of 6.4×10^{-9} during different outdoor environments All the original contributions newness findings and experimental results etc are reported in the book Subject of work Wireless Optical Communication The content of the book can be referred by various application designers and or academicians for working on FSOC transceiver design laser cutting laser metrology laser surgery beam focusing pointing beacon positioning and coupling etc Further all necessary MATLAB and VHDL codes are also given on appropriate pages for the readers quick clear understanding *Free-Space Laser Communications* Arun K.

Majumdar, Jennifer C Ricklin, 2010-05-05 Free space laser communications also referred to as optical communications is a popular subject in today's technological marketplace A number of conferences on this subject have been organized by professional societies such as SPIE the International Society of Photo Optical and Instrumentation Engineering OSA Optical Society of America and IEEE Institute of Electrical and Electronics Engineers The evolving technology of free space laser

communications is emerging as an appealing alternative to RF communications for links between satellites as well as a promising addition to terrestrial applications such as video or computer linkups between buildings There is a pressing need for more information on laser communications that is comprehensive enough to provide in depth knowledge of free space communications and that can satisfy the current demands of the research and commercial needs This book has been designed to provide a comprehensive unified tutorial to further understanding of the fundamental techniques for laser communications through the earth's atmosphere The driving force behind free space laser communications is the continuous demand for higher bandwidth to deliver high capacity voice data and images to the customer Free space propagation distances include ranges that encompass a few millimeters for example between optical interconnects in a computer using photonics to replace metal interconnects a few meters such as indoor communications a few kilometers between buildings campuses and hospitals and even up to thousands of kilometers such as from an aircraft or satellite to the ground
