

GALÁPAGOS ON THE MAP

Situated on both sides of the equator, about halfway west of the South American continent, lies an archipelago of over 130 volcanic islands, rocks and reefs. The Galápagos Islands span a wide area of approximately 800km (500miles), from a line in Santa Fea de Capota. They spread over 1,000km (620miles) of the ocean in an average depth of 1,000m (3,280ft). The highest point of the land belongs to the highest island, Santa Fe.

The distance between the most northern Santa Fe and the most southern Española is more than 1,000km (620miles). The combined coastline of the islands measures 1,300km (810miles), more than mainland Ecuador. The highest elevation point is that of Santa Fe, with a height of 1,931m (6,335ft).

The Galápagos Islands and their surrounding waters belong to Ecuador, constituting the Galápagos Province. The islands were frequently visited during the history of golden fisheries and whaling of Haida ships. The island of Santa Cruz has had intense affect

since before the Ecuadorian government declared the Galápagos Archipelago as a Reserve in 1936, being placed in the territory for the bird park. The other islands also received their respective names from Archipelago de Santa Fea de Capota in 1936.

One half of the islands are inhabited. The census conducted throughout Ecuador in 2010, counted just over 25,000 legal residents, 1500 temporary residents, and up to 1,000 residents whose status was characterized as "irregular". It is estimated that some 40,000 people live on the islands now in total.

The provincial capital is Santa Fea de Capota, known as San Cristóbal. About half of the population lives in Santa Fea de Capota. The other inhabited islands are Santa Fea and Santa Cruz, which has a small road town and airport facilities. Santa Fea de Capota, Santa Cruz and Santa Fea accommodate the international airports, although in 2010 only private planes have arrived from mainland Ecuador. A third airport near Santa Fea de Capota handles flights between the islands.
