Electric Toy Making for Amateurs T. O'conor Sloane,2015-06-25 Excerpt from Electric Toy Making for Amateurs Including Batteries Magnets Motors Miscellaneous Toys and Dynamo Construction Electric toy making is a very comprehensive title one which may be made to embrace far more ground than this work pretends to cover In the realms of amateur work of all kinds mechanics natural science and even legerdemain or natural magic electricity can be made to play an important part The methods of applying it to simple constructions within the reach and scope of amateurs constitute the theme of this book The effort has been to present the reader with a suggestive line of experimentation and construction and to open a field within which his own ideas can have indefinite scope and extent It is believed that little in the way of actual toy making can be done outside of the general limits here defined About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Electric Toy Making for Amateurs Thomas O'Connor Sloane,1911 **Electric Toy Making for Amateurs** T. O'conor T. O'conor Sloane,James Zimmerhoff,2017-09-10 Educational toys sometimes called instructive toys are objects of play generally designed for children which are expected to stimulate learning They are often intended to meet an educational purpose such as helping a child develop a particular skill or teaching a child about a particular subject They often simplify miniaturize or model activities and objects used by adults Although children are constantly interacting with and learning about the world many of the objects they interact with and learn from are not toys Toys are generally considered to be specifically built for children s use A child might play with and learn from a rock or a stick but it would not be considered an

educational toy because 1 it is a natural object not a designed one and 2 it has no expected educational purpose The difference lies in perception or reality of the toy s intention and value An educational toy is expected to educate It is expected to instruct promote intellectuality emotional or physical development An educational toy should teach a child about a particular subject or help a child develop a particular skill More toys are designed with the child s education and development in mind today than ever before Toys have changed substantially throughout history as has the concept of childhood itself Educational toys in particular tend to reflect the cultural concerns of their time Research on the history of toys and their use tends to focus on western cultures but work has also been done on North Africa and the Sahara Dolls can be seen as an early educational toy because dolls acted as substitutes allowing children to learn to care for living babies and children Similarly toy bows and arrows and other weapons acted as substitutes for real weapons enabling children to develop skills needed for hunting or fighting Up until the 20th century however manufactured toys were not readily available and most often were owned by wealthy families 174 Nonetheless We often forget that throughout history children have happily played without toys and manufactured playthings
