Affective and Emotional Aspects of Human-Computer Interaction M. Pivec,2006-03-02 The learning process can be seen as an emotional and personal experience that is addictive and motivates learners to proactive behavior Divided in three parts this title discusses major topics such as emotions motivation games and game experience Heart of the Machine Richard Yonck,2017-03-07 Imagine a robotic stuffed animal that can read and respond to a child's emotional state a commercial that can recognize and change based on a customer's facial expression or a company that can actually create feelings as though a person were experiencing them naturally Heart of the Machine explores the next giant step in the relationship between humans and technology the ability of computers to recognize respond to and even replicate emotions Computers have long been integral to our lives and their advances continue at an exponential rate Many believe that artificial intelligence equal or superior to human intelligence will happen in the not too distant future some even think machine consciousness will follow Futurist Richard Yonck argues that emotion the first most basic and most natural form of communication is at the heart of how we will soon work with and use computers Instilling emotions into computers is the next leap in our centuries old obsession with creating machines that replicate humans But for every benefit this progress may bring to our lives there is a possible pitfall Emotion recognition could lead to advanced surveillance and the same technology that can manipulate our feelings could become a method of mass control And as shown in movies like Her and Ex Machina our society already holds a deep seated anxiety about what might happen if machines could actually feel and break free from our control Heart of the Machine is an exploration of the new and inevitable ways in which mankind and technology will interact *The Emotional Computer* Jose Antonio Jauregui,1995-09-06 In *The Emotional Computer* d Jose Antonio Jauregui explores what it is about the human self which sets us apart from machines His highly original belief is of the brain as an emotional computer programmed via genes or via culture informing us to eat play tennis or have sex through the activation of feelings The Science of Emotional Intelligence Gerald Matthews,Moshe Zeidner,Richard D. Roberts,2007 During the past decade emotional intelligence has been subjected to both scientific and public scrutiny Numerous articles have been published on the topic in both academic journals and the popular press testifying to the potential usefulness of emotional intelligence in psychology business education the home and the workplace However until now there has been no systematic synthesis that grounds emotional intelligence in contemporary theory while simultaneously sorting scientific approaches from popular fads

and pseudoscience Bringing together leading international experts from a variety of sub disciplines this volume aims to integrate recent research on emotional intelligence The contributors address a set of focused questions concerning theory measures and applications How does emotional intelligence relate to personality What is the optimal approach to testing emotional intelligence How can emotional intelligence be trained In the final section of the book the volume editors distill and synthesize the main points made by these experts and set forth an agenda for building a science of emotional intelligence in the future Science of Emotional Intelligence will be an invaluable resource for researchers and professionals in psychology education the health sciences and business

Soft Logic Joseph Grünfeld,2000 *Soft Logic* is a fascinating study that links scientific and mathematical reasoning to literature and the arts In this work Joseph Grünfeld argues that justification by resemblance is more common in science than is generally recognized That is symbolic and metaphorical modes of thinking which are largely analogical often play a significant role in the interpretation of formal systems Noting that twentieth century non Aristotelian forms of reasoning have greatly expanded our understanding of what constitutes logic Grünfeld explores a wide range of relevant topics including reasonableness metaphor deconstruction postmodernism aesthetics art and philosophy In the process he identifies the postmodernist implications of modern logic and develops how they may be applied to both science and art Scholars of philosophy aesthetics and art will find this comprehensive and insightful work thought provoking

Women and Computer Based

Technologies Hope Morritt, 1997 This book highlights the diversity of professional women in education who use computer based technologies They represent differences in socioeconomic status ethnicity and age They were selected for this study because they use computer based technologies in their daily work The conceptual framework underlying this research is feminist standpoint theory Standpoint theory in this study stems from the work of Harding 1991 who has grounded standpoint theory in eight claims These claims were connected to clusters that were organized into segments that could be contrasted compared and analyzed Themes were developed and photographs were used to operationalize the cluster categories Methodology used for this study included three structured interviews The first interview elicited background information Interview two used the photographs as an auto driving technique to stimulate discussion The third interview asked the respondents to validate their narratives and to describe their reactions to the feminist perspective Results of this study demonstrate the importance of valuing women s lives as starting points for research and as generators of evidence for or against knowledge claims specifically as their lives relate to computer based technologies Women need to learn to value and network with other women in the use of technology These respondents early learning experiences reflect the cultural agenda and an absence of hands on science activities They also encounter gender oppression in many forms in their daily life experiences Although they all had opportunities to engage in computer learning at different stages of their life the time to learn and the opportunities to access computers were constraints that prevented further advancement These women educators predict positive futures for girls who are computer literate but warn of the potential of the increasing power of technology to divide women in our society into the haves and the have nots Implications and practical applications from
