Electromagnetic Fields Sources And Media

Thorkild B. Hansen, Arthur D. Yaghjian

Electromagnetic Fields Sources And Media:

Electromagnetic Fields Alan M. Portis, 1978 Here is a textbook that develops the classical theory of electromagnetic fields from a contemporary point of view with applications to the physics of condensed matter and plasmas It more thoroughly relates electricity and magnetism to media integrating solid state physics plasma physics and optics into the electromagnetic fields course Portis's balance of theory and application along with his effective use of relativity has produced a text that is constructive as well as complete He emphasizes the experimental investigations of Coulomb and Faraday together with the special theory of relativity including applications at each stage of development to topics in the physics of condensed matter and plasmas Each section is followed by exercises that are designed to reinforce the topics discussed Chapter problems emphasize the connection with the present material to previous chapters Besides his balance of theory and application reviewers have also praised Portis for the logical organization consistency in notation and presentation and the inclusion of condensed matter to topics Ideal for those with a background in mathematics and general physics
Electromagnetic Fields can be used in courses that also recognize solid state physics optics plasma physics and modern physics Publisher

Electromagnetic Fields and Waves Eugene I. Nefyodov, Sergey M. Smolskiy, 2018-08-27 This textbook is intended for a course in electromagnetism for upper undergraduate and graduate students The main concepts and laws of classical macroscopic electrodynamics and initial information about generalized laws of modern electromagnetics are discussed explaining some paradoxes of the modern theory The reader then gets acquainted with electrodynamics methods of field analysis on the basis of wave equation solution Emission physics are considered using an example of the Huygens Fresnel Kirchhoff canonic principle The representation about strict electrodynamics task statement on the base of Maxwell equations boundary conditions emission conditions and the condition on the edge is given Different classes of approximate boundary conditions are presented which essentially simplify understanding of process physics The canonic Fresnel functions are given and their generalization on the case of anisotropic impedance The free waves in closed waveguides and in strip slotted and edge dielectric transmission lines are described A large number of Mathcad programs for illustration of field patterns and its properties in different guiding structures are provided The material is organized for self study as well as classroom use

Plane-Wave Theory of Time-Domain Fields Thorkild B. Hansen, Arthur D. Yaghjian, 1999-06-10 This invaluable book provides a comprehensive framework for the formulation and solution of numerous problems involving the radiation reception propagation and scattering of electromagnetic and acoustic waves Filled with original derivations and theorems it includes the first rigorous development of plane wave expansions for time domain electromagnetic and acoustic fields For the past 35 years near field measurement techniques have been confined to the frequency domain Now with the publication of this book probe corrected near field measurement techniques have been extended to ultra wide band short pulse transmitting and receiving antennas and transducers By combining unencumbered

straightforward derivations with in depth expositions of prerequisite material the authors have created an invaluable resource for research scientists and engineers in electromagnetics and acoustics and a definitive reference on plane wave expansions and near field measurements Featured topics include An introduction to the basic electromagnetic and acoustic field equations A rigorous development of time domain and frequency domain plane wave representations The formulation of time domain frequency domain and static planar near field measurement techniques with and without probe correction Sampling theorems and computation schemes for time domain and frequency domain fields Analytic signal formulas that simplify the formulation and analysis of transient fields Wave phenomena such as electromagnetic missiles encountered only in the time domain Definitive force and power relations for electromagnetic and acoustic fields and sources Sponsored by IEEE Antennas and Propagation Society

Interactions Between Electromagnetic Field and Moving Conducting Strip Ihor Kondratenko, Yuriy Vasetsky, Artur Zaporozhets, 2023-11-27 The book combines two interrelated lines of research One of them is devoted to the development of the theory for solving a certain class of three dimensional electromagnetic field problems of the three dimensional electromagnetic field taking into account eddy currents in a moving conducting magnetizing body Preference is given to the development of the analytical solution methods of the three dimensional quasi stationary problem of field conjugation in the system a contour of an arbitrary spatial configuration with an alternating current is conducting body with a flat boundary surface The second direction refers to the development of mathematical models for solving applied problems which involve the use of developed methods for calculating the electromagnetic field and their characteristics The main application of calculation methods is aimed at solving problems of heat treatment non ferrous and ferrous metal products using the induction method of heating in a transverse magnetic field The inverse problems are solved to determine the inductor configuration as flat and spatial current contours for providing the necessary temperature distribution of moving metal strips To achieve uniform heating of strips across the width using inductors in the form of flat current contours parallel to the strip surface it is advisable to use combinations of current contours where the geometric dimensions are determined by the size and electro physical parameters of the metal strips A more uniform temperature distribution during high frequency induction heating is achieved by using inductors in the form of current contours of the required spatial configuration The book is intended for researchers postgraduate students and students specialized in theory and calculations of electromagnetic fields and induction heating installations

An Introduction to Applied Electromagnetics and Optics Vladimir V. Mitin, Dmitry I. Sementsov, 2016-11-18 Modern technology is rapidly developing and for this reason future engineers need to acquire advanced knowledge in science and technology including electromagnetic phenomena This book is a contemporary text of a one semester course for junior electrical engineering students It covers a broad spectrum of electromagnetic phenomena such as surface waves plasmas photonic crystals negative refraction as well as related materials including superconductors In addition the text brings together

electromagnetism and optics as the majority of texts discuss electromagnetism disconnected from optics In contrast in this book both are discussed Seven labs have been developed to accompany the material of the book **Electromagnetic Field Near Conducting Half-Space** Yuriy Vasetsky, Artur Zaporozhets, 2023-08-11 The book is devoted to the solution of one general problem of the theory of a three dimensional quasi stationary sinusoidal and pulse electromagnetic field These studies unlike many well known works are based on obtained exact analytical solution of the problem for the field generated by external current sources near the conducting body with plane surface The solution for the vector and scalar potentials electric and magnetic intensities in the dielectric and conducting media is found without restrictions on the configuration of current sources properties of the media and field frequency Some general properties of field formation for arbitrary field in the considered system are obtained in particular full compensation by the field of the electric charge distributed on the interface between the media the normal component of the induced external electric field and accordingly the equality to zero the components both of the current density and the electric field intensity perpendicular to the interface the non uniform electromagnetic field decreases in depth of conducting medium faster than uniform field It is shown that the exact analytical solution depends on the values of the parameter proportional to the ratio of the field penetration depth to the distance between the external field sources and the body The concept of strong skin effect is extended to the case of small value of the introduced parameter A significant simplification of the expressions was obtained as an asymptotic expansion on this small parameter In the case of pulsed fields approximate method gives the highest accuracy during important initial period of pulse time For asymptotic expansion the approximate impedance boundary condition is generalized to the diffusion of non uniform field into conducting medium The book is intended for the researchers postgraduate students and students specialized in theory and calculations of electromagnetic fields **Integral Methods in Low-Frequency Electromagnetics** Ivo

Dolezel, Pavel Karban, Pavel Solin, 2009-07-27 A modern presentation of integral methods in low frequency electromagnetics This book provides state of the art knowledge on integral methods in low frequency electromagnetics Blending theory with numerous examples it introduces key aspects of the integral methods used in engineering as a powerful alternative to PDE based models Readers will get complete coverage of The electromagnetic field and its basic characteristics An overview of solution methods Solutions of electromagnetic fields by integral expressions Integral and integrodifferential methods

Advanced Engineering Electromagnetics Constantine A. Balanis, 2012-04-13 Balanis new edition of Advanced Engineering and Electromagnetics features new content on the basics of Metamaterials including figures to demonstrate their properties Several small sections have been added on Mie series scattering by a PEC sphere wedge diffraction by a wedge with surface impedances and curve surface diffraction Throughout the book there are more helpful examples end of chapter problems and references as well as lecture notes in PowerPoint format The revised edition also features MATLAB programs to animate some of the wave phenomena such as propagation reflection and refraction by planar interfaces scattering by PEC circular
