Advances in Communications, Computing, Networks and Security Volume 7 Paul Dowland, Steven Furnell, **CyberPhysical Systems** Kostas Siozios, Dimitrios Soudris, Elias Kosmatopoulos, 2022-09-01 As systems continue to evolve they rely less on human decision making and more on computational intelligence This trend in conjunction to the available technologies for providing advanced sensing measurement process control and communication lead towards the new field of Cyber Physical System CPS Cyber physical systems are expected to play a major role in the design and development of future engineering platforms with new capabilities that far exceed today's levels of autonomy functionality and usability Although these systems exhibit remarkable characteristics their design and implementation is a challenging issue as numerous heterogeneous components and services have to be appropriately modeled and simulated together The problem of designing efficient CPS becomes far more challenging in case the target system has to meet also real time constraints

CyberPhysical Systems Decision Making Mechanisms and Applications describes essential theory recent research and large scale usecases that addresses urgent challenges in CPS architectures In particular it includes chapters on Decision making for large scale CPS Modeling of CPS with emphasis at the control mechanisms Hardware software implementation of the control mechanisms Fault tolerant and reliability issues for the control mechanisms Cyberphysical user cases that incorporate challenging decision making
