**Fusion Energy Conversion** George Hunter Miley, 1976      **Energy Conversion Systems Reference Handbook**  
Electro-Optical Systems (Firm), 1960      Life at the Center of the Energy Crisis George Hunter Miley, 2013 Life at the Center  
of the Energy Crisis A Technologist's Search for a Black Swan describes the story of the author's work and struggles in the  
field of energy research The author's experience in the field spans from work with Admiral Rickover and the Nuclear Navy to  
research with NASA designing propulsion for spacecraft to travel to Mars The book provides insights into the differences  
between nuclear research done during the Cold War by the two superpowers and offers a commentary on the flaws in each  
system with hope for change in the future The book also provides a look into the development of the nuclear engineering  
program at the University of Illinois from the author's years as a professor and an administrator      **Intersociety Energy  
Conversion Engineering Conference**, 1986      **Another Introduction to Nuclear Energy** Edenilson Brandl, For  
centuries humanity has sought to understand and harness the fundamental forces of nature This work represents an attempt  
to delve into one of the most powerful and transformative energy sources the energy locked within atomic nuclei From its  
humble beginnings in theoretical physics to its pivotal role in shaping modern energy systems the study of nuclear energy  
has pushed the boundaries of science technology and human ambition This book is designed not only to provide foundational  
knowledge about nuclear energy but also to explore its future possibilities By examining the intersection of science  
engineering and policy it seeks to bridge the gap between theoretical understanding and practical application It is written  
with the hope of fostering informed discussions on how nuclear technology can contribute to sustainable energy solutions  
while addressing its challenges As you embark on this journey you will encounter topics ranging from the basic principles of  
atomic structure to the ethical dilemmas surrounding nuclear proliferation The goal is to equip readers with the knowledge  
to navigate these complex issues and inspire innovative thinking for a better future      **Proceedings of the ... Intersociety

Conversion for Fusion Reactors*, 1976 The direct conversion to electrical energy of the energy carried by the leakage plasma

from a fusion reactor and by the ions that are not converted to neutrals in a neutral beam injector is discussed The conversion process is electrostatic deceleration and direct particle collection as distinct from plasma expansion against a time varying magnetic field or conversion in an EXB duct both MHD Relatively simple 1 stage plasma direct converters are discussed which can have efficiencies of about 50 percent More complex and costly measured in kW 2 3 4 and 22 stage concepts have been tested at efficiencies approaching 90 percent Beam direct converters have been tested at 15 keV and 2 kW of power at 70 2 percent efficiency and a test of a 120 keV 1 MW version is being prepared Designs for a 120 keV 4 MW unit are presented The beam direct converter besides saving on power supplies and on beam dumps should raise the efficiency of creating a neutral beam from 40 percent without direct conversion to 70 percent with direct conversion for a 120 keV deuterium beam The technological limits determining power handling and lifetime such as space charge effects heat removal electrode material sputtering blistering voltage holding and insulation design are discussed The application of plasma direct converters to toroidal plasma confinement concepts is also discussed
