

BEYOND THE CLINIC

Recognizing Futile Care in Veterinary Medicine

Kate Boatright, VMD

Consider the case of a 17-year-old domestic shorthair cat with chronic kidney disease (CKD) hospitalized for diarrhea and supportive care. After 3 days on intravenous fluids, antiemetics, and appetite stimulants, the kidney values are unchanged. The pet has not eaten in over a week and spends most of its day in lateral recumbency, only lifting its head occasionally when the owner visits. Despite the cat's condition and grave prognosis, the owner wants to continue hospitalization and is considering placement of a feeding tube to provide nutrition.

Cases like this are distressing for all involved—the patient, the pet owner, the veterinarian, and the veterinary team members who are cage-side providing care in futile situations. In a profession with continued technological advances in diagnostic and treatment options for our patients, we may not find ourselves asking the question of whether we *can* do something, but whether we *should*.

But are cases of futile care actually common in veterinary medicine? A recent study in the *Journal of the American Veterinary Medical Association* sought to answer this question.¹ Nathan Peterson, DVM, DACVECC, associate clinical professor at Cornell University and one of the study's authors, shared his surprise in the results. "It was a problem I knew I was

experiencing," he says. "We went into [the study] thinking it was a more isolated problem." Instead, the survey found that 99% of veterinarian respondents—the majority of whom were board-certified specialists—believe that futile care occurs in veterinary medicine, and 85% stated they had experienced a case of futile care within the previous year.¹

"The near unanimity in people's experiences points to this being a profession-wide problem," says Dr. Peterson. Because of the amount of distress caused by these situations, learning to recognize and navigate situations of futile care is important to improving mental health and wellbeing for veterinary professionals. A common language is needed to facilitate discussions around futile care and find ways to support patients, pet families, and veterinary professionals.

WHAT IS FUTILE CARE?

Dr. Peterson shared a personal case of a German shepherd dog with megaesophagus that was repeatedly hospitalized for aspiration pneumonia. As presentations increased in frequency and hospitalizations increased in length, he advised the client that the pet would eventually die from aspiration pneumonia. Despite this, the owner elected to place the dog on a ventilator during a severe episode. "[This] went against everything
