Future Is Ours Foreseeing Managing And Creating The Future:

The Future Is Ours Graham H. May,1996-05-28 Why do we continue to think about imagine and forecast the future despite believing we will probably be wrong Why do we need to do so What does the future mean and how do we relate to it Is it possible that Western societies condition their members into inability to cope with the future These and other fundamental questions are explored in *The Future Is Ours* which is written as an intermediate text for use in future oriented modules within BA courses in International Business Management Urban Planning and Environmental Politics *Lessons for the Future* Dr David Hicks,David Hicks,2003-08-27 Drawing on the latest research in futures studies this book provides new insights into ways of helping both students and teachers think more critically and creatively about their own future and that of wider society It acknowledges the crucial role of education in helping young people understand the nature of local and global change and the social and environmental impacts such change will have on their future Setting out a clear educational rationale for promoting global and futures perspective in education it provides helpful and stimulating examples of futures orientated classroom activities It also includes fascinating research into children s views of the future [The Future Is Ours](#) Graham H. toolkit that helps link protocol with the assessment methods currently available for evaluating the sustainability of urban development It details the decision support mechanisms developed for users of the system to guide them in selecting the appropriate assessment methods for a variety of evaluations This book provides case studies drawn from locations across Europe and also provides best practice examples demonstrating those protocols that planners property developers and design and construction professionals have followed and how they have selected the assessment methods they need to best evaluate the sustainability of cities districts neighbourhoods and buildings *The Futurist*, 2001 **Recent**

Developments in Foresight Methodologies Maria Giaoutzi, Bartolomeo Sapio, 2012-11-28 Foresight is an area within Futures Studies that focuses on critical thinking concerning long term developments whether within the public sector or in industry and management and is something of a sub section of complexity and network science This book examines developments in foresight methodologies and relates in its greater part to the work done in the context of the COSTA22 network of the EU on Foresight Methodologies Foresight is a professional practice that supports significant decisions and as such it needs to be more assured of its claims to knowledge methodology Foresight is practiced across many domains and is not the preserve of specialized futurists or indeed of foresight specialists However the disciplines of foresight are not well articulated or disseminated across domains leading to re inventions and practice that does not make best use of experience in other domains The methodological development of foresight is an important task that aims at strengthening the pool of the tools available for application thereby empowering the actors involved in foresight practice Elaborating further on methodological issues such as those presented in the present book enables the actors involved in foresight to begin to critique current practice from this perspective and thirdly to begin to design foresight practice The present trends towards methodological concerns indicates a move from given expert predicted futures to one in which futures are nurtured through a dialogue among stakeholders The book has four parts each elaborating on a set of aspects of foresight methodologies After an introductory section Part II considers theorizing about foresight methodologies Part III covers system content issues and Part IV presents foresight tools and approaches *Rescuing All Our Futures* Ziauddin Sardar, 1999-03-30 This book argues that futures studies has abandoned its goal of exploring diverse and alternative futures Its over emphasis on forecasting and prediction its over preoccupation with technology and its neglect of non western cultures and concerns have all transformed it into an instrument for the colonisation of the future *Chaotics* Georges Anderla, Anthony Dunning, Simon Forge, 1997 To what degree are our lives in reality governed by misguided notions Do businesses in fact succeed by chance Are societal and business forces and their effects perhaps not really understood at all According to the three international authors who have come together to write this book the real world cannot be understood in terms of conventional deterministic philosophies nor even of standard chaos theory A new discipline is needed one that recognizes that complexity in itself has a powerful but subtle role to play The new discipline of chaotics introduced by the authors will alter our thinking about the real forces of

change in our society Beginning with the foundations of the discipline their book applies chaotics to business and wealth creation and to society itself *Futures the Journal of Forcasting, planning and policy* ,1997 **FUTURES** ,1997

Transforming Communication Sohail Inayatullah,Susan Leggett,2002 Will the communications revolution become able to transform communication as a human act of sharing values Or will it allow capitalism to pursue economic efficiencies among the world s wealthy nations These questions are considered from a variety of perspectives *The Evolutionary Outrider* David Loye,1998-06-25 The overriding challenge for our species during the 21st century many believe will be that of evolving or becoming extinct Can the theory of evolution be expanded into a source of guidance that could help our species save itself This collection brings together the thinking of scholars in a wide range of fields in social as well as natural science directed to this end Moving beyond a critique of neo Darwinism and sociobiology to explore the action implications of new theory including Loye s reconstruction of the long ignored full vision of Charles Darwin and Laszlo s new QVI fifth field theory essays explore the potential for the impact of self organizing and self regulating organism of the biology of love and the moral directional thrust of the human as revealed in new discoveries in the fields of biology psychology brain research sociology economics history cultural evolution and Darwinian re evaluation As such the collection will be of interest to the educational community the futurist community and the more general global foresight community of concerned people

FUTURES VOL. 34 NO. 6 ,2002 *Proceedings of the Canadian Model Forest Network's Partnership Meeting, Halifax, N.S., September 8-9, 1999* Canadian Forest Service,Canadian Model Forest Network's Partnership Meeting (1999 : Halifax, N.S.),2000 *Advancing Futures* James A. Dator,2002-04-30 What is Futures Studies what are the theories and methods underlying the field What are its basic concepts and metaphors and how is it related to other academic fields These are the core questions addressed in this book by a comprehensive assembly of distinguished scholars They explore the enigma of why Futures Studies despite its growing maturity as an intellectual endeavor after more than three decades of groundbreaking work still struggles for institutional acceptance Together these contributors paint a picture of Futures Studies not so much a product of the stale intellectual heritage of the 20th century but as a vibrant harbinger of intellectual perspectives sure to gain wider currency in the 21st Drawing on their backgrounds in fields as diverse as political science history sociology anthropology economics psychology management and human ecology this international line up of contributors includes world systems theorist Immanuel Wallerstein philosopher Peter Manicas management professor Bill Halal and industrial sociologist Arthur Shostak *Futures Institute for the Future*,2004 [Multidimensional Global Change](#) Kirill I[A]kovlevich Kondrat'ev,1998-07 [Multidimensional Global Change](#) Kirill Ya Kondratyev Forty years of technological progress have had a catastrophic impact on the environment since this progress has been based on the ruthless exploitation of natural resources 20 percent of the fertile soil on cultivated land has been lost 20 per cent of tropical forests have been cleared desertification continues at a rate of 6 million hectares annually and deforestation amounts to 11 million hectares

annually Economic estimations practically never take into account this depletion and damage to natural resources the harmful effect on human health the deprivation of future generations of those natural resources and the long term impact in the form of biospheric deformation In this text Kirill Kondratyev emphasises the extremely complex and interdisciplinary nature of multidimensional global change highlighting its principal aspects and many practical consequences economic social etc as well as the relationships between environmental problems on global continental and national scales He demonstrates that the main limiting factor of further quantitative development of humankind is the available biosphere resources and that the basic criterion of ecological well or ill being is the level of depletion of these resources The author highlights an acute social controversy of the modern world in that the level of biospheric resource consumption in industrially developed countries exceeds by far that in the Third World This disparity could be eliminated through advancements such as the decarbonisation of energy production and the development of new technologies However he shows that radical improvement of the situation can only be achieved by reducing the population number and establishing a new fair economic order He emphasises that when considering global change problems it is important to avoid exaggerations and he strikes a balance between the most gloomy predictions and more encouraging estimations Readership Professional scientists environmentalists and engineers concerned with research relating to global change and its consequences managers and senior engineers wishing to gain an insight into the problems caused by global change and undergraduate and postgraduate students of geography meteorology climatology atmospheric physics and environmental science
