Carr, 1950 **A Field Guide to Geophysics in Archaeology** John Oswin, 2009-07-21 Geophysics operations in archaeology have become well known through exposure on television However the technique is presented as the action of specialists and something of a mystery where people walk about with strange contraptions and results appear from a computer This is not the case however Some scientific knowledge is needed in order to understand how the machines work and what they detect but otherwise it is only necessary to know how to handle the instruments how to survey a field and how to interpret the computer results This book provides all the relevant information It explains geophysics operations in archaeology describes the science that gives the soil properties to measure and the means by which the instruments make their measurements Dr John Oswin is in charge of the geophysics operation of the Bath and Camerton Archaeological Society and his work has recently been the subject of a television programme He has taught many students how to use geophysical equipment

*Geophysical Potential Fields* Lev Eppelbaum, 2019-07-18 Geophysical Potential Fields Geological and Environmental Applications Volume Two investigates the similarities and differences of potential geophysical fields including gravity magnetics temperature resistivity and self potential along with the influence of noise on these fields As part of the Computational Geophysics series this volume provides computational examples and methods for effectively solving geophysical problems in a full cycle manner Including both quantitative and qualitative analysis the book offers different filtering and transformation procedures integrated analysis and special interpretation methodologies also presenting a developed 3D algorithm for combined modeling of gravity and magnetic fields in complex environments The book also includes applications of the unified potential field system such as studying deep structure searching hydrocarbon and ore deposits localizing buried water horizons and rockslide areas tectono structural mapping of water basins and classifying archaeological targets It is an ideal and unique resource for geophysicists exploration geologists archaeologists

and environmental scientists Clearly demonstrates the successive stages of geophysical field analysis for different geological and environmental targets Provides a unified system for potential geophysical field analysis that is demonstrated by numerous examples of system application Demonstrates the possibilities for rapidly and effectively interpreting anomalies receiving some knowledge of modern wavelet diffusion maps and informational approach applications in geophysics and combined gravity magnetic methodology of 3D modeling Includes text of the Geological Space Field Calculation GSFC software intended for 3D combined modeling of gravity and magnetic fields in complex environments *Geophysics Today* Sergey Fomel,2010 In celebration of the 75th year of publication the Geophysics editorial team invited a collection of papers written by well recognized experts in various areas of exploration geophysics These invited papers not only form part of the present book but they also appear in the September October 2010 special section of the journal Geophysics Today A Survey of the Field as the Journal Celebrates its 75th Anniversary complements this special section with an additional group of papers drawn from Geophysics to address areas beyond the invited articles The result is a snapshot of the state of the art in the field as Geophysics passes its three quarter century mark This book is Geophysical References Series No 16
