

4 Effects of Globalization on the Environment

Increased Transport of Goods: Shipping products globally can harm the environment by increasing emissions, destroying habitats, and spreading invasive species.

Economic Specialization: While specialization fosters trade and cooperation, it can quickly deplete natural resources.

Decreased Biodiversity: Habitat loss and climate change—among other factors—have led to population decline across organisms.

Increased Awareness: As more people learn about globalization's impact, they can develop new laws and regulations to mitigate it.
