Outer Planet Entry Heating and Thermal Protection Raymond Viskanta,1979 Entry Heating and thermal protection ,1980 **Thermal Vacuum Facility for Testing Thermal Protection Systems** Kamran Daryabeigi,2002 **Entry Thermal Protection** ,1968 **Entry Heating and Thermal Protection** , **Outer Planet Entry Heating and Thermal Protection** , **Procedures for the Design of Thermal Protection Systems for Maneuverable Re-entry Vehicles** Donald Turrentine,1962 Atmospheric re entry of earth orbital hypersonic glide vehicles creates thermal problems The heat affects not only the materials and construction of the airframe but also the crew and various subsystems of the vehicle Successful solution of these problems depends upon the development of an effective thermal protective concept which will also give the designer some latitude in his design philosophy The role of the protective system is to significantly attenuate the influx of heat that is aerodynamically generated within the surrounding boundary layer Attenuation is accomplished by combining external radiation shielding elements with backup insulation materials and an appropriate cooling system Analytical procedures are presented for determining significant system parameters by transforming the differential heat conduction or diffusion equation into an algebraic expression by employing the calculus of finite differences The adaptation of the resulting equation to digital computer programming is discussed and numerical results are presented to indicate systems of minimum weight Author *Entry Heating and Thermal Protection* Aerospace Sciences Meeting. 17, 1979, New Orleans, La.,Thermophysics Conference. 14, 1979, Orlando, Fla.,1980 **Entry Heating and Thermal Protection** Walter B. requirements for simulating re entry conditions are briefly described A description of the thermal vacuum facility the quartz lamp array and the control system is provided The facility was evaluated by subjecting an 18 by 36 in Inconel honeycomb panel to a typical re entry pressure and surface temperature profile For most of the test duration the average difference between the measured and desired pressures was 1.6% of reading with a standard deviation of 7.4% while the average difference between measured and desired temperatures was 7.6% of reading with a standard deviation of 6.5% The temperature non uniformity across the panel was 12% during the initial heating phase t less than 500 sec and less than 2% during the remainder of the test Daryabeigi Kamran and Knutson Jeffrey R and Sikora Joseph G Langley Research Center NASA TM 2002 211734 NAS 1 15 211734 L 18163 *Thermal Protection Systems.
