Chess Calculation Training for Kids and Club Players Romain Edouard,2020-02-20 Most tactics and training books are good for boosting your calculation ability but they do not teach you how to calculate This is the difference I want to make with my own books by arranging the exercises in different categories so that the thinking process more closely resembles the one we have during a game Level 1 of my new series consists of learning how to checkmate your opponent The first three chapters are a rather classical tactics training then things get harder In Chapter 4 you have to trap your opponent s king in Chapter 5 you have to win by eliminating the defender in your opponent s position in Chapter 6 by using a decisive double threat and in Chapter 7 with an unexpected winning sacrifice Chapter 8 consists of a few other problems which required short instructions You should go through the book chapter by chapter The complexity of the examples increases throughout the book and you shouldn t skip a category if you consider it too easy The book covers the full thinking process you should have when trying to mate your opponent or when the situation of your opponent s king may tempt you to look further in a mating direction As with all training there is a warm up a tough phase a break a relaxing phase then another tough phase and respecting the pedagogical order of the book will make sure that you derive the maximum benefit from it and are 100% ready for Level 2 After you have completed all 276exercises in the book you won t let your opponent s king escape when it shouldn t Reading it should pay off quickly in terms of results And this is exactly what I wish you Calculation Jacob Aagaard,2012 Have there been times during a game when you have calculated a position for half an hour only to find out that most of what you were thinking about was of little use If you have not maybe the only way to improve your calculation is to upgrade your processor But if you are human then this book will offer you practical advice and an effective training plan to think differently and make decisions far more efficiently In Calculation thinking methods such as Candidates Combinations Prophylaxis Comparison Elimination Intermediate Moves Imagination and Traps are explained to the reader and ownership of them is offered through a carefully selected series of exercises **Chess Calculation Training Volume 3** Romain Edouard,2018-09-08 In this volume 3 the author presents many games played by legendary players such as Alekhine Karpov

Kasparov and Fischer but also many forgotten or unknown examples that will help you to improve your calculation and knowledge of all areas of the game
