Perez, Instructor, Sherri Messersmith, 2013-10-03 After having written five developmental algebra textbooks I decided to

team up with Larry Perez from Saddleback College in California to write a paperback series beginning with Basic College

Math or arithmetic We know first hand that teaching developmental mathematics is about so much more than the math

Today many of our students are also in developmental reading and or writing courses so they don't read well Many students

are poor note takers do not know how to read use a textbook have poor study skills and have never learned time management

skills Instructors know that a major reason for high failure rates in developmental math courses is due to the fact that many

of our students do not know how to be college students They don't want to fail they just don't know how to succeed Larry and

I have adapted what we do in the classroom to try to address the non math needs of our students But we wondered how can

we do this in a textbook Enter P O W E R P O W E R is a five step process to promote learning and critical thinking Each step

in the process Prepare Organize Work Evaluate and Rethink provides students with a proven framework that will help them

achieve academic success P O W E R maximizes the success of students by using a research based best practices approach It

is a scientifically based framework promoting student success with each step in the process based on empirical research

findings related to students academic performance in a college environment      Intermediate Algebra Denny

Burzynski, Wade Ellis, 1989      *Beginning and Intermediate Algebra* Tyler Wallace, 2018-02-13 Get Better Results with high

quality content exercise sets and step by step pedagogy Tyler Wallace continues to offer an enlightened approach grounded

in the fundamentals of classroom experience in Beginning and Intermediate Algebra The text reflects the compassion and

insight of its experienced author with features developed to address the specific needs of developmental level students

Throughout the text the author communicates to students the very points their instructors are likely to make during lecture

and this helps to reinforce the concepts and provide instruction that leads students to mastery and success The exercises

along with the number of practice problems and group activities available permit instructors to choose from a wealth of

problems allowing ample opportunity for students to practice what they learn in lecture to hone their skills In this way the book perfectly complements any learning platform whether traditional lecture or distance learning its instruction is so reflective of what comes from lecture that students will feel as comfortable outside of class as they do inside class with their instructor

*Beginning and Intermediate Algebra with P. O. W. E. R. Learning* Sherri Messersmith, Robert Stephen Feldman, 2014-10 Beginning and Intermediate Algebra by Sherri Messersmith has been widely implemented in schools across the country The 4th edition has been updated and expanded to include a study skills component The P O W E R framework is integrated into each section and new study strategies and exercises are tied to every chapter The conversational writing style practical applications innovative student resources and expanded Connect Math content makes this an appealing and very teachable option for faculty The P O W E R Framework What makes P O W E R a unique tool for the classroom A major challenge in developmental courses is that students at this level struggle with basic study skills and habits Maybe this is one of their first college courses or perhaps they are adults returning to school after a long absence Either way many of the individuals taking this course don't know how to be good students Instructors often don't have the time the resources or the expertise to teach success skills AND the math concepts The new team of Messersmith Perez and Feldman offer a scientifically based approach to meet this challenge The P O W E R Learning Framework was developed by successful author psychologist student success instructor and researcher Bob Feldman It is a method of accomplishing any task using five simple and consistent steps Prepare Organize Work Evaluate Rethink This framework is integrated at every level of the text to help students successfully learn math concepts while at the same time developing habits that will serve them well throughout their college careers and in their daily lives
