Experimental Animation:

Experimental Animation Miriam Harris, Lilly Husbands, Paul Taberham, 2019-01-30 *Experimental Animation From Analogue to Digital* focuses on both experimental animation's deep roots in the twentieth century and its current position in the twenty-first century media landscape. Each chapter incorporates a variety of theoretical lenses including historical materialist, phenomenological, and scientific perspectives. Acknowledging that process is a fundamental operation underlining experimental practice, the book includes not only chapters by international academics but also interviews with well-known experimental animation practitioners such as William Kentridge, Jodie Mack, Larry Cuba, Martha Colburn, and Max Hattler. These interviews document both their creative process and thoughts about experimental animation's ontology to give readers insight into contemporary practice. Global in its scope, the book features and discusses lesser-known practitioners and unique case studies offering both undergraduate and graduate students a collection of valuable contributions to film and animation studies.

Experimental and Expanded Animation Vicky Smith, Nicky Hamlyn, 2018-08-21 This book discusses developments and continuities in experimental animation that since Robert Russett and Cecile Starr's *Experimental Animation: Origins of a New Art* (1976) has proliferated in the context of expanded cinema, performance, and live making and is today exhibited in galleries, public sites, and online. With reference to historical, critical, phenomenological, and interdisciplinary approaches, international researchers offer new and diverse methodologies for thinking through these myriad animation practices. This volume addresses fundamental questions of form such as drawing and the line but also broadens out to encompass topics such as the inter-medial, post-humanism, the real, fakeness, and fabrication, causation, new forms of synthetic space, ecology, critical re-workings of cartoons, and process as narrative. This book will appeal to cross- and interdisciplinary researchers, animation practitioners, scholars, teachers, and students from Fine Art, Film and Media Studies, Philosophy, and Aesthetics.

Experimental Animation Robert Russett, Cecile Starr, 1976 A collage composed from the energies, enthusiasms, and ideas of a hearty band of film mavericks whose exploits are for the first time treated in book form. A number of motifs emerge from Russett's and Starr's collection, including the vibrant interface between film and the other arts (painting and music), the growing importance of evolving technologies, and most important, film's exciting potential as a mode of personal expression.
