Explosion Protection:

Explosion Protection Heinrich Groh, 2003-12-18 This book makes Hazardous or Electrical Area Classification simple In plants processing flammable materials every effort is made to avoid the escape of such materials and in addition stringent measures are taken to exclude sources of ignition A complex array of standards surround this topic which has lead to an overly conservative approach being taken This type of approach means that much more expensive electrical apparatus than is necessary is installed To avoid this unnecessary expenditure Dr Groh clearly explains the relevant standards so that accurate assessment of the risks associated with hazardous areas is possible He also identifies possible ignition sources and methods of designing apparatus which do not cause sparks thereby maintaining safety Covers must have information regarding IEC CENELEC standards in electrical or hazardous area classification Provides a clear overview of a complex area

Handbook of Thermoprocessing Technologies Axel von Starck, Alfred Mühlbauer, Carl Kramer, 2005 In Europe thermoprocessing is the third largest energy consumption sector following traffic and room heating Its structure is very much diversified and complex Therefore it is split into a large number of subdivisions each of them having a high importance for the industrial economy Accordingly we find the application know how for the design and the execution of respective equipment represented by a multitude of small but very specialized and significant companies and their experts As a result there was only little chance to find a comprehensive survey of the practical side of this technology so far This gap is now filled by the new Handbook of Thermoprocessing Technologies based on the contributions of many highly experienced outstanding engineers working in this field The main intention of this book is the presentation of practical thermal processing for the improvement of material and parts in industrial application Additionally a summary of respective thermal and material science fundamentals is given as well as basic fuel related and electrical engineering knowledge for this technology and finally design aspects components and safety

requirements for the necessary heating installations are covered In conclusion a very wide and competent state of the art description is now available for all manufacturers and users of thermoprocessing equipment But also specialists from neighbouring fields students and all those who are generally interested in this important but widely unknown technology will find a quick survey here as well as a very profound expertise

place where concentrations of flammable gases vapors or dusts occur Electrical equipment that must be installed in such locations is especially designed and tested to ensure it does not initiate an explosion due to arcing contacts or high surface temperature of equipment For example a household light switch may emit a small harmless visible spark when switching in an ordinary atmosphere this arc is of no concern but if a flammable vapor is present the arc might start an explosion Electrical equipment intended for use in a chemical factory or refinery is designed either to contain any explosion within the device or is designed not to produce sparks with sufficient energy to trigger an explosion Many strategies exist for safety in electrical installations The simplest strategy is to minimize the amount of electrical equipment installed in a hazardous area either by keeping the equipment out of the area altogether or by making the area less hazardous by process improvements or ventilation with clean air Intrinsic safety or non incendive equipment and wiring methods is a set of practices for apparatus designed with low power levels and low stored energy Insufficient energy is available to produce an arc that can ignite the surrounding explosive mixture Equipment enclosures can be pressurized with clean air or inert gas and designed with various
