The Global Environment and World Politics Elizabeth R. DeSombre, 2007 *The Global Politics of the Environment* Lorraine Elliott, 2004-08 Human activity is changing the global environment on a scale unlike that of any other era Environmental deterioration is now a global issue ecologically politically and economically that requires global solutions Yet there is considerable disagreement over what kinds of strategies we should adopt in order to halt and reverse damage to the global ecosystem What kinds of international institutions are best suited to dealing with global environmental problems Why are women and indigenous peoples still marginalized in global environmental politics What are the consequences of the global ecological crisis for economic and security policies The Global Politics of the Environment makes sense of the often seemingly irreconcilable answers to these questions It focuses throughout on the tensions between mainstream strategies which seek to build support for reforms

through existing institutions and radical critiques which argue that environmental degradation is a symptom of a dysfunctional world order that must itself be transformed if we are to meet the challenge of saving the planet

Paterson, 2000-04-07 *Understanding Global Environmental Politics* develops a new critical approach to global environmental politics It argues that the major power structures of world politics are deeply problematic in ecological terms and that they cannot be easily used to resolve major environmental challenges such as global warming Instead of simply advocating the construction of new international institutions to respond to such challenges therefore the book argues that the construction of alternative social and political structures is necessary

The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics. It makes a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into four broad themes: states and cooperation, global governance, the political economy of governance and knowledge, and ethics, with each section covering key emerging issues. In-depth explorations are given to topics such as climate change, multinational corporations, international agreements, and UN organizations, regulations, and business standards, trade, and international finance, multilevel and transnational governance, and ecological citizenship.

Ribot, James N. Rosenau, Barbara Jancar, and Ann Hawkins, envision a world in which governments, driven by various pressures, find themselves increasingly bound to common efforts and joint solutions.
