Global Politics Of Environment 2ed:

The Global Politics of the Environment Lorraine Elliott, 2004-08 Human activity is changing the global environment on a scale unlike that of any other era Environmental deterioration is now a global issue ecologically politically and economically that requires global solutions Yet there is considerable disagreement over what kinds of strategies we should adopt in order to halt and reverse damage to the global ecosystem What kinds of international institutions are best suited to dealing with global environmental problems Why are women and indigenous peoples still marginalized in global environmental politics What are the consequences of the global ecological crisis for economic and security policies The **Global Politics of the Environment** makes sense of the often seemingly irreconcilable answers to these questions It focuses throughout on the tensions between mainstream strategies which seek to build support for reforms through existing institutions and radical critiques which argue that environmental degradation is a symptom of a dysfunctional world order that must itself be transformed if we are to meet the challenge of saving the planet [Global Environmental Politics](#) Hayley Stevenson, 2017-11-02 Concern about humanity's impact on the planet has never been greater but what are the drivers of environmental change This wide ranging introductory textbook outlines the competing explanations of why environmental problems occur and examines the different political approaches taken to address them Adopting a case study approach Hayley Stevenson enables students to gain a detailed understanding of how theories and concepts are applied in practice Diverse perspectives on a variety of contemporary environmental challenges from climate change to hazardous waste as well as various responses from multilateral diplomacy to consumer focused campaigns provide students with an in depth understanding of the merits and limitations of different forms of political action Refined on the basis of classroom feedback features include textboxes key points a glossary of key terms questions further reading suggestions and supplementary online resources This lively book is an essential resource for advanced undergraduate and postgraduate courses on global environmental politics and environmental policy **Handbook of Global Environmental Politics** Peter Dauvergne, 2012-01-01 The second edition of this Handbook contains more than 30 new and original articles as well six essential updates by leading scholars of global environmental politics This landmark book maps the latest theoretical and empirical research in this energetic and growing field Captured here are the pioneering and lively debates over concerns for the health of the planet and how they might best be addressed The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics It makes a case for an expansive definition of the field one that embraces an interdisciplinary literature on the connections between global politics and environmental change The remaining chapters are divided into four broad themes states and cooperation global governance the political economy of governance and knowledge and ethics with each section covering key emerging issues In depth explorations are given to topics such as climate change multinational corporations international agreements and UN organizations regulations and business

standards trade and international finance multilevel and transnational governance and ecological citizenship Handbook of Global Environmental Politics Second Edition is a comprehensive review of the field and offers cutting edge ideas for further research As such scholars students and policymakers will find themselves looking to it for many years to come

Ideologies in World Politics Klaus-Gerd Giesen,2020-09-02 Political ideologies shape the behaviour of states international institutions terrorist groups political elites non governmental organisations and other international actors The book analyses how the most important of them affect today s world politics and contribute to build a new and complex world order

The Global Politics of the Environment Lorraine M. Elliott,1998 What kinds of international institutions are best suited to dealing with global environmental problems How can we address the crisis of state capacity What role should non state actors have in environmental governance Why are women and indigenous peoples still marginalized in global environmental politics What are the consequences of the global ecological crisis for economic and security policies The Global Politics of the Environment makes sense of the often seemingly irreconcilable ideas behind answers to these questions It focuses throughout on the tensions between mainstream strategies which seek to build support for reforms through existing institutions and radical critiques which argue that environmental degradation is a symptom of a dysfunctional world order that must itself be transformed if we are to meet the challenge of saving the planet

The Global Politics of Power, Justice and Death Peter Anderson,2005-07-15 A challenging yet readily accessible introduction to current global change which looks inter alia at the future of the state the environment war and global rivalries international political economy international law and the UN

Politics and the Environment James Connelly,Graham Smith,2003 This textbook is at the forefront of its field and is an invaluable resource for undergraduates studying politics and environment studies The most comprehensive book on the subject this new edition has been expanded and revised

Energy, Policy, and the Environment Marja Järvelä,Sirkku Juhola,2011-09-01 This book sets the questions of energy and the environment in the North in the global context and further addresses historical developments views on energy taxation and tariffs and effects of EU energy policy Climate change appears more frequently than ever on the top of global and national policy agendas In the current situation traditional environmental concern and environmental policy may not suffice in the face of the global challenge as manifested by climate change and the depletion of fossil energy resources But as new data comes to light new energy policies and changes in economic structures are crucial for putting into action global climate policy Crucial tasks in environmental policy are the sustainable utilisation of natural resources and the conservation of natural and human made habitats One of the areas of the world where this comes into play the most is in the Nordic countries Northern societies are predominantly high tech high consumption and high energy supply societies And with the transition from older energy sources wood for heating and stream water for power production to newer ones oil and nuclear energy discussions on the environmental impact have led to public and corporate action The Northern countries have been at the forefront in finding

sustainable alternatives to solve conflicts arising from the rise in energy needs. However, these countries have taken different pathways with different policies in attempting to achieve this. As the needs and concerns from climate change arise, a Northern dimension involving policies that contrast to European and global trends emerges. Energy Policy and the Environment Modeling Sustainable Development for the North explores that dimension. International Relations from the Global South Arlene B. Tickner, Karen Smith, 2020-05-21. This exciting new textbook challenges the implicit notions inherent in most existing International Relations (IR) scholarship and instead presents the subject as seen from different vantage points in the global South. Divided into four sections: 1. the IR discipline, 2. key concepts and categories, 3. global issues, and 4. IR futures, it examines the ways in which world politics have been addressed by traditional core approaches and explores the limitations of these treatments for understanding both Southern and Northern experiences of the international. The book encourages readers to consider how key ideas have been developed in the discipline and through systematic interventions by contributors from around the globe. It aims at both transforming and enriching the dominant terms of scholarly debate. This empowering, critical, and reflexive tool for thinking about the diversity of experiences of international relations and for placing them front and center in the classroom will help professors and students in both the global North and the global South envision the world differently. In addition to general introductory IR courses at both the undergraduate and graduate levels, it will appeal to courses on sociology and historiography of knowledge, globalization, neoliberalism, security, the state, imperialism, and international political economy.

Environment and Politics Timothy Doyle, Doug McEachern, Sherilyn MacGregor, 2015-08-27. *Environment and Politics* 4th Edition is a concise introduction to this ever-expanding interdisciplinary field, explaining and illustrating how concepts, conflicts, movements, political systems, and the practices of policy making can be analysed in a systematic way. This book provides a comprehensive overview of the key themes that shape the field and examines a diverse range of environmental problems and policy solutions found in different countries and cultures. The new edition has been extensively revised to include up-to-date explanation of green political theories and traditions and the debates that shape action on the ground. It contains an expanded discussion of environmental movements that work in the Global North, the Global South, and transnationally. Greater attention has been given to the roles of corporations, non-governmental organizations, the media, consumers, and citizens in order to reflect the changing nature of environmental governance. The text also focuses throughout on debates surrounding the concepts of environmental security, environmental justice, and environmental citizenship. The authors examine the institutional responses of parliaments, administrative, legal, and electoral systems, the more informal politics of social movements, and the politics of markets and the corporate sector as they respond to or resist the greening of societies. This engaging text has been fully updated to offer readers a greater understanding of international, national, and local environmental politics, as well as expected future developments at all levels. *Environment and Politics* continues to use illustrative examples of conflicts, people, and events spanning North and South.

America Europe Asia Africa and Australia giving it global perspective and relevance Each chapter includes questions for debate as well as a list of key words and resources for independent research This successful textbook remains a key resource for undergraduate and postgraduate studies across politics environmental studies development studies and human geography courses

Global Environmental Politics Gareth Porter, Janet Welsh Brown, Pamela Chasek, 1995-12-07 When *Global Environmental Politics* was first published the environment was just emerging as a pivotal issue in traditional international relations Now the environment is a topic central to discussions of security politics and the relationship between foreign and domestic policy and so much has changed that Gareth Porter and Janet Welsh Brown found themselves rewriting more than half of their original text With new cases on biodiversity and desertification this classic work is more complete and up to date than any survey of environmental politics on the market In addition to providing a concise yet comprehensive overview of global environmental issues the authors have worked to contextualize key topics such as the Rio conference water security the biodiversity treaty and trade in toxics Environmental concerns from global warming to the ozone layer to whaling are seen as challenges to transnational relations with governments NGOs IGOs and MNCs all facing the prospect of multilateral interaction to solve a growing global problem *Global Environmental Politics*, 2004
