

Setting SMART goals

BiteSize Learning

Specific

The goal is concrete and tangible - everyone knows what it looks like.

Measurable

The goal has an objective measure of success that everyone can understand.

Attainable

The goal is challenging, but should be achievable with the resources available.

Relevant

The goal meaningfully contributes to larger objectives like the overall mission.

Timely

This goal has a deadline or, better yet, a timeline of progress milestones.

Goals In Space:

Goals in Space William Sims Bainbridge, 1991 *Goals in Space* draws upon a detailed sample of 4 000 Americans to discover what values this society attaches to the space program Systematic survey procedures identify 125 specific goals of the space program and Bainbridge examines how these represent the perceived general values of spaceflight including economic industrial environmental social spiritual emotional and military benefits While the most popular justifications for spaceflight offered immediate gain for the current society many Americans have a clear image of the revolutionary transformations that spaceflight may accomplish in the long run notably colonization of the solar system The findings of this study clarify the ideological bases for space technology and set the terms for the future debate on investment in space exploration

America's Space Futures George C. Marshall Institute, 2013-12-01 *America's Space Futures* is an important contribution to the ongoing debate about space policy the American space program and the human destiny in space It lays out alternative paradigms and frameworks for assessing America's future in space and how different visions would require changes to America's current approach to space development and exploration Since the end of the Apollo program in the 1970s the U S civil space program has accomplished a great number of things from deploying orbital observatories that see into deep space and exploring objects around the solar system robotically to studying the earth and building the International Space Station perhaps the most challenging engineering feat ever achieved by man Yet the program frequently finds itself adrift when these missions come to an end Consequently space experts have long worried that the sum total of NASA's accomplishments is somehow still less than the total value of its component parts Policymakers respond by establishing national commissions and expert panels to help lay out a long term guiding vision for the space program From the National Commission on Space in the 1980s through 1990's Advisory Committee on the Future of the U S Space Program the Columbia Accident Investigation Board to the National Research Council in 2012 panel after panel has bemoaned the lack of a unifying vision for the space program Unable to sustain such a vision over the course of several Presidential administrations the White House and Congress have papered over the uncertainty with compromises that sometimes leave NASA working against itself and no one satisfied In 2013 The Space Foundation one of the United States

largest space education organizations insisted NASA needs to embrace a singular unambiguous purpose that leverages its core strengths and provides a clear direction for prioritizing tasks and assigning resources America's Space Futures responds by considering the costs benefits and risks of different visions for the American space program Contributors who all have years of experience working on space issues from a variety of perspectives civil commercial military intelligence academic and advocacy offer out of the box thinking and analyses that lays out a space future and sets priorities to achieve a specific national goal These include space commerce and commercialization maximizing American soft power through international space cooperation settling the solar system and advancing the frontiers of technology Their goal is to raise new ideas sharpen differences rather than blur them and establish better foundations for setting the space program on a path for a brighter future Essayists include William B Adkins president of Adkins Strategies and an aerospace engineer with experience in the civil and national security space communities Charles M Miller President of NextGen Space a space entrepreneur and former NASA Senior Advisor for Commercial Space Dr Scott D Pace Director of George Washington University's Space Policy Institute and a former senior official at NASA and the White House Office of Science and Technology Policy Eric Sterner a Fellow at the George C Marshall Institute adjunct professor at Missouri State University and a former senior official at NASA and the House Science and Armed Services Committees and Dr James A Vedda a senior policy analyst at the Aerospace Corporation with years of experience in the Department of Defense author of two books on the space program and a former associate professor at the University of North Dakota
