Evolution, Brain, and Behavior R. B. Masterton, W. Hodos, H. J. **Intelligence and Evolutionary Biology** Harry J. Jerison, Irene Jerison, 2013-06-29 In evolutionary biology intelligence must be defined in terms of traits that are subject to the major forces of organic evolution Accordingly this volume is concerned with the substantive questions that are relevant to the evolutionary problem Comparisons of learning abilities are highlighted by a detailed report on similarities between honeybees and higher vertebrates Several chapters are concerned with the evolution of cerebral lateralization and the control of language and recent analyses of the evolution of encephalization and neocorticalization including a review of effects of domestication on brain size are presented The relationship between brain size and intelligence is debated vigorously Most unusual however is the persistent concern with analytic and philosophical issues that arise in the study of this topic from the applications of new developments on artificial intelligence as a source of cognitive theory to the recognition of the evolutionary process itself as a theory of knowledge in evolutionary epistemology

**Behavioral Evolution and Integrative Levels** G. Greenberg, E. Tobach, 2014-05-22 First published in 1984 In this collection of essays Schneirla is identified as a scientist and citizen unafraid to hold and present unpopular ideas Schneirla had always been opposed to the hereditarian views that allowed for the politicalization of psychology and spoke out early against the idea of the genetic basis of behavior It is fitting that his ideas which still form the nexus of the major theoretical criticism of classical ethology now can be seen to stand in opposition to the hereditarian views of socio biology

**Neurobiology of Comparative Cognition** Raymond P. Kesner, David S. Olton, 2014-02-25 This book represents a unique and elaborate exposition of the neural organization of language memory and spatial perception in a wide variety of species including humans bees fish rodents and monkeys The editors have united the comparative approach with its emphasis on evolutionary determinants of behavior the neurobiological approach with its emphasis on the neural determinants of behavior and the cognitive approach with its emphasis on understanding higher order mental functions The combination of these three approaches provides an unusual look at the neurobiology of comparative cognition and should stimulate increased investigations in this field and related disciplines
