Genetic Engineering Opposing Viewpoints:

Genetic Engineering Louise I. Gerdes,2004 Fears about the dangers of human cloning the impact of genetically engineered babies and the risks of genetically modified foods continue to stimulate the debate over genetic engineering In this newly updated anthology authors submit their views about the risks and benefits of genetic engineering and how genetic engineering should be regulated if at all *Genetic Engineering* James D. Torr,2001 Examines the social and ethical questions about genetically engineered animals and human gene therapy **Genetic Engineering** Carol Wekesser,1990

Genetic Engineering William Dudley,1990 Pro and con discussions of all aspects of genetic engineering **Genetic Engineering** Carol Wekesser,1996-01 Surveys the uses of genetic engineering in medicine agriculture and industry and the possible consequences of such human interventions Biotechnology and Genetic Engineering Facts On File, Incorporated,2008 Provides an overview chronology of events glossary and annotated bibliography on biotechnology and genetic engineering **Genetic Engineering** Tina Kafka,2009-07-17 Genetic engineering refers to the many different manipulative processes regarding genetic modification such as deleting portions of DNA sequence or splicing together DNA from more than one individual This process can be applied to any organism like viruses animals or humans The use of technical equipment and scientific understanding to manipulate DNA overrides the natural process of evolution making this scientific advancement controversial This informative volume explores what genetic engineering consists of and provides a balanced overview about the controversies that surround the practice *Genetic Engineering* Mark Y. Herring,2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time Herring provides a detailed history of the debate in a fair and balanced manner using proponents points of view to make individual cases both pro and con Narrative chapters cover such topics as the Human Genome Project gene splicing cloning genetically altered foods and DNA and crime solving Students and the general public will find a comprehensive survey of the genetic engineering debate Appendices include statements from Robert P George and Peter Singer two of the most prominent scholars on the subject and a bibliography of print and electronic resources for further research **Standard Catalog for High School Libraries** H.W. Wilson Company,2003 Each vol is divided into 2 parts 1st 7th ed Dictionary catalog and Classified catalog 8th 9th ed have 3rd part Directory of publishers **Biomedical Ethics** Tamara L. Roleff,1998 Contains thirty essays by various authors that present opposing views on the ethics of biomedical practices in the areas of human cloning organ donations reproductive technologies and genetic research **Re-Creating Nature** James T. Bradley,2019-09-24 An exploration of the moral and ethical implications of new biotechnologies Many of the ethical issues raised by new technologies have not been widely examined discussed or indeed settled For example robotics technology challenges the notion of personhood Should a robot capable of making what humans would call ethical decisions be held responsible for those decisions and the resultant actions Should society reward and punish robots in the same way that it does humans Likewise issues of safety

environmental concerns and distributive justice arise with the increasing acceptance of genetically modified organisms (GMOs) in food production, nanotechnology in engineering and medicine, and human gene therapy and enhancement. The problem of dual use when a technology can be used both to benefit and to harm exists with virtually all new technologies but is central in the context of emerging 21st century technologies ranging from artificial intelligence and robotics to human gene editing and brain-computer interfacing. In *Re-Creating Nature: Science, Technology, and Human Values in the Twenty-First Century*, James T. Bradley addresses emerging biotechnologies with prodigious potential to benefit humankind but that are also fraught with ethical consequences. Some actually possess the power to directly alter the evolution of life on earth, including human. Specifically, these topics include stem cells, synthetic biology, GMOs in agriculture, nanotechnology, bioterrorism, CRISPR gene editing technology, three-parent babies, robotics and roboethics, artificial intelligence and human brain research, and neurotechnologies. Offering clear explanations of these various technologies, a pragmatic presentation of the conundrums involved, and questions that illuminate hypothetical situations, Bradley guides discussions of these and other thorny issues resulting from the development of new biotechnologies. He also highlights the responsibilities of scientists to conduct research in an ethical manner and the responsibilities of nonscientists to become science literate in the twenty-first century.

Genetic Engineering Noël Merino, 2013. Each title in the highly acclaimed *Opposing Viewpoints* series explores a specific issue by placing expert opinions in a unique pro-con format; the viewpoints are selected from a wide range of highly respected and often hard-to-find publications. This title addresses the controversies associated with genetic engineering of humans, including so-called designer babies, cloning, and embryonic stem cell research, animals, and crops. The topics explored are whether genetic engineering should be permitted. Each volume in the *Opposing Viewpoints Series* could serve as a model, not only providing access to a wide diversity of opinions but also stimulating readers to do further research for group discussion and individual interest. Both shrill and moderate.

[Genetic Engineering](#) Lisa Yount, 2002. From genetically modified foods to human cloning, aspects of genetic engineering, modifying genes of living things in the laboratory, stir up strong feelings and lively debate.
