Genetic Prospects Verna V. Gehring, 2003 While the collapse of the Soviet Union has diminished the force of George Orwell's 1984 the other great dystopian tract of the twentieth century Aldous Huxley's Brave New World is timelier than ever The ongoing process of genetic science may well revolutionize medicine and human reproduction and it may end by giving us the ability to transform the human species itself This new power has raised hopes that we will solve a range of genetically based problems that afflict us It has also evoked fears that we are on the verge of a post human future in which precious but necessary norms regulating individual and social life will be set aside Will we have the moral and political wisdom to avoid the pitfalls in using new biotechnologies Genetic Prospects considers the resources from which the needed norms and maxims might be drawn scrutinizing carefully the contributions of common sense religion and moral sentiment Taken together the essays in this volume apply philosophical analysis to address three kinds of questions What are the implications of genetic science for our understanding of nature What might it influence in our conception of human nature What challenges does genetic science pose for specific issues of private conduct or public policy

**The Risks and Ethics of Human Gene Editing** Madeleine Hayenhjelm, Christer Nordlund, 2025-02-01 This Open Access book is about the risks and the ethics of human germline gene editing i.e. the possibility to make heritable changes to the DNA of early human embryos or germ cells Is there something particularly morally problematic about editing the human germline Is there something unique about germline editing and if so does this suggest that we ought not to edit the human germline or only in particular circumstances or for particular purposes What would be a wise and responsible approach to editing the human germline from a moral perspective The book has three broad aims First to present an inclusive map over the current scholarly debate on the ethics of human germline gene editing Second to provide a philosophical and critical guide to the various ideas and arguments in this debate Third to apply an ethics of risk perspective and defend a morally cautious position on human germline gene editing

**Debating Procreation** David Benatar, David Wasserman, 2015-06-01 While procreation is ubiquitous attention to the ethical issues involved in creating children is

**Epidemiology, Prevention, and Control of Animal Diseases in Kazakhstan** Andres M. Perez ,Sarsenbay K. Abdrakhmanov,2026-02-16 Kazakhstan Kyrgyzstan Tajikistan and Turkmenistan Uzbekistan commonly referred to as the five stan countries of Central Asia share some important historical geographical and epidemiological factors and conditions The five countries are relatively large landlocked territories Their administrative boundaries do not necessarily match the distribution of ethnicities and for that reason transboundary movements are common Pastoralists and nomadic communities are still prevailing in the region Furthermore the five stan countries were part of the former Soviet Union in which political conditions represented a barrier for researchers and academicians to publish their research results in peer reviewed publications Much of that research is important to understand the epidemiology prevention and control of important animal diseases in the region and globally The Research Topic here welcomes reviews perspective papers and original research intended to explore epidemiological factors of diseases in one or more of the five stan countries of Central Asia Examples of publications that may be of interest include but are not limited to reviews mini reviews or descriptions perspectives of 1 Control strategies for specific animal diseases or groups of diseases and critical evaluation of their performance including a discussion of positive aspects and lessons learned 2 Current or historical observational studies describing the epidemiological dynamics of an animal disease or groups of diseases in a population 3 Critical reviews of unpublished work related to the epidemiology of animal diseases in the region Potential contributors are encouraged to contact the Guest Associate Editors in advance to discuss their ideas assess suitability and if acceptable discuss the article type that would best fit their ideas

**Gene Drives on the Horizon** National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Life Sciences,Committee on Gene Drive Research in Non-Human Organisms: Recommendations for Responsible Conduct,2016-08-28 Research on gene drive systems is rapidly advancing Many proposed applications of gene drive research aim to solve environmental and public health challenges including the reduction of poverty and the burden of vector borne diseases such as malaria and dengue which disproportionately impact low and middle income countries However due to their intrinsic qualities of rapid spread and irreversibility gene drive systems raise many questions with respect to their safety relative to public and environmental health Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back questions about the ethics surrounding use of this research are complex and will require very careful exploration Gene Drives on the Horizon outlines the state of knowledge relative to the science ethics public engagement and risk assessment as they pertain to research directions of gene drive systems and governance of the research process This report offers principles for responsible practices of gene drive research and related applications for use by investigators their institutions the research
