### What is ESD?

Electrostatic discharge is defined as the transfer of charge between bodies at different electrical potentials. The electrostatic charge occurs when two different materials rub or slide together or are separated.

Examples are: walking over synthetic floors, rubbing of synthetic garments, shifting of plastic boxes, unrolling of PVC adhesive tape, moving of conveyor belt.

When two objects with different charges get closer, electrons can suddenly flow from one object to the other.

ESD can also occur when a high electric field develops between two objects in close proximity.
