Bright eyes

The transparent body of this deep-sea squid is difficult for predators to see. However, its eyes can appear as dark shadows when lit by sunlight from above. Organs above its

eyes use a chemical reaction involving a substance called luciferin to produce light which cancels out the shadows. The squid can then swim safely onwards.

Exploring Chemistry:

Exploring Chemistry (Loose-Leaf) Matthew Johll, 2012-05-04 **Exploring Chemistry** MATTHEW JOHLL, 2012-05-04

Matthew Johll's *Exploring Chemistry* covers the standard topics for the nonmajors course in the typical order but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real life situations. For example, students work through the often difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed *Investigating Chemistry*, now in its Third Edition, but *Exploring Chemistry* goes beyond the other book's specific focus on examples from forensic science to use real life stories from cooking, athletics, genetics, green chemistry, and more. Case Study Approach: A unifying case study provides the narrative throughline for each chapter, introducing chemical concepts in a relatable context. As students read about new drugs, new polymer materials, social issues, and everyday products, they learn the relevant basics of chemistry. Case studies include: Chapter 1: Exploring Our Water Supply; Chapter 2: Exploring Evidence from a Crime Scene; Chapter 3: Exploring Historical Climate Change; Chapter 4: Investigating the Chemistry of a Poison; Chapter 5: Exploring Chemotherapy Drugs; Chapter 6: Exploring Chemistry in the Kitchen; Chapter 7: Exploring Antibiotics and Drug Resistant Infections; Chapter 8: Exploring Biodegradable Polymers; Chapter 9: Investigating the Chemistry of Fire and Arson; Chapter 10: Exploring Airport Security; Chapter 11: Exploring Green Chemistry; Chapter 12: Exploring Nuclear Power; Chapter 13: Exploring Athletic Performance; Chapter 14: Exploring Genetically Modified Food. Focusing Questions connect the case to the chemistry in the chapter, helping students identify what to look for as they read. Learning Objectives set out the key ideas of each chapter section. Visuals highlight interesting aspects of forensic evidence and investigations. Each page is designed to heighten the interaction between the written text and the many detailed and accurate figures and photos of chemical reactions, processes, equipment, and molecular models. Many figures are aimed directly at showing how physical and chemical changes happen over a period of time. Detailed Worked Examples Paired with Practice Problems give students a helpful step-by-step roadmap for problem solving, including the simple, often algebraic steps left out of many textbooks. A practice problem follows each worked example so students can check their understanding immediately. Flexible Mathematics Sections let instructors customize the mathematical coverage of their course. Through conceptual explanations, worked examples, and practice problems, students receive ample explanation and practice on the math topics. *Exploring Chemistry Laboratory Experiments in General, Organic and Biological Chemistry* Julie R. Peller, 2003-04. This lab manual is organized and written to ensure that non-science majors are comfortable with chemistry labs by making the experiments more applicable to students' daily lives. This approach also serves to make the experiments more understandable. Many labs relate specifically to allied health fields.
