

Exponential Curve Fitting

We have added several new functions that can be considered when we fit curves to data.

$$f(x) = ab^x, \text{ or } ae^{kx}$$

$$a > 0, b > 1, k > 0$$

$$f(x) = ab^{-x}, \text{ or } ae^{-kx}$$

$$a > 0, b > 1, k > 0$$

Exponential Fitting:

Exponential Fitting Liviu Gr. Ixaru, Guido Vanden Berghe, 2004-04-30 Exponential Fitting is a procedure for an efficient numerical approach of functions consisting of weighted sums of exponential trigonometric or hyperbolic functions with slowly varying weight functions This book is the first one devoted to this subject Operations on the functions described above like numerical differentiation quadrature interpolation or solving ordinary differential equations whose solution is of this type are of real interest nowadays in many phenomena as oscillations vibrations rotations or wave propagation The authors studied the field for many years and contributed to it Since the total number of papers accumulated so far in this field exceeds 200 and the fact that these papers are spread over journals with various profiles such as applied mathematics computer science computational physics and chemistry it was time to compact and to systematically present this vast material In this book a series of aspects is covered ranging from the theory of the procedure up to direct applications and sometimes including ready to use programs The book can also be used as a textbook for graduate students

Practical Handbook of Curve Fitting

Sandra Arlinghaus, 1994-05-09 Practical Handbook of Curve Fitting is a reference work assembled by Arlinghaus and a set of editors with well over a century of combined experience in various disciplines and activities related to curve fitting The book demonstrates how to analyze World data bases and graph and map the results Default settings in software packages can produce attractive graphs of data imported into the software Often however the default graph has no equation associated with it and cannot therefore be used as a tool for further analysis or projection of the data The same software can often be used to generate curves from equations The reader is shown directly and in a series of steps how to fit curves to data using Lotus 1 2 3 There are traditional unbounded curve fitting techniques lines of least squares exponentials logistic curves and Gompertz curves There is the bounded curve fitting technique of cubic spline interpolation Beyond these there is a detailed application of Feigenbaum's graphical analysis from chaos theory and there is a hint as to how fractal geometry might come into play Curve fitting algorithms take on new life when they are actually used on real world data They are used in numerous worked examples drawn from electronic data bases of public domain information from the Stars data base of The World Bank and from the WRD data base of the World Resources Institute The applications are current and reflect a state of the art interest in the human dimensions of global change

Topics in Fluorescence Spectroscopy

Joseph R. Lakowicz, 1994-11-30 Time resolved fluorescence spectroscopy is widely used as a research tool in biochemistry and biophysics These uses of fluorescence have resulted in extensive knowledge of the structure and dynamics of biological macromolecules This information has been gained by studies of phenomena that affect the excited state such as the local environment quenching processes and energy transfer Topics in Fluorescence Spectroscopy Volume 4 Probe Design and Chemical Sensing reflects a new trend which is the use of time resolved fluorescence in analytical and clinical chemistry

These emerging applications of time resolved fluorescence are the result of continued advances in laser detector and computer technology For instance pho multiplier tubes PMT were previously bulky devices Miniature PMTs are now available and the performance of simpler detectors is continually improving There is also considerable effort to develop fluorophores that can be excited with the red ne infrared NIR output of laser diodes Using such probes one can readily imagine small time resolved fluorometers even hand held devices being used fordctor s office or home health care

Femtochemistry Ahmed H. Zewail, 1994 These two volumes on Femtochemistry present a timely contribution to a field central to the understanding of the dynamics of the chemical bond This century has witnessed great strides in time and space resolutions down to the atomic scale providing chemists biologists and physicists with unprecedented opportunities for seeing microscopic structures and dynamics Femtochemistry is concerned with the time resolution of the most elementary motions of atoms during chemical change bond breaking and bond making on the femtosecond 10⁻¹⁵ second time scale This atomic scale of time resolution has now reached the ultimate for the chemical bond and as Lord George Porter puts it chemists are near the end of the race against time These two volumes cover the general concepts techniques and applications of femtochemistry Professor Ahmed Zewail who has made the pioneering contributions in this field has from over 250 publications selected the articles for this anthology These volumes begin with a commentary and a historical chronology of the milestones He then presents a broad perspective of the current state of knowledge in femtochemistry by researchers around the world and discusses possible new directions In the words of a colleague it is a must on the reading list for all of my students all readers will find this to be an informative and valuable overview The introductory articles in Volume I provide

reviews for both the non experts as well as for experts in the field This is followed by papers on the basic concepts For applications elementary reactions are studied first and then complex reactions Volume I is complete with studies of solvation dynamics non reactive systems ultrafast electron diffraction and the control of chemical reactions Volume II continues with reaction rates the concept of elementary intramolecular vibrational energy redistribution IVR and the phenomena of rotational coherence which has become a powerful tool for the determination of molecular structure via time resolution The second volume ends with an extensive list of references according to topics based on work by Professor Zewail and his group at Caltech These collected works by Professor Zewail will certainly be indispensable to both experts and beginners in the field The author is known for his clarity and for his creative and systematic contributions These volumes will be of interest and should prove useful to chemists biologists and physicists As noted by Professor J Manz Berlin and Professor A W Castleman Jr Penn State femtochemistry is yielding exciting new discoveries from analysis to control of chemical reactions with applications in many domains of chemistry and related fields e g physical organic and inorganic chemistry surface science molecular biology etc
