Finalization In Science:

Finalization in Science Wolf Schäfer, 2012-12-06 These essays on Finalization in Science The Social Orientation of Scientific Progress comprise a remarkable problematic and controversial book The authors propose a thesis about the social direction of scientific research which was the occasion of a lively and often bitter debate in Germany from 1976 to 1982 Their provocative thesis briefly is this that modern science converges historically to the development of a number of closed theories i e stable and relatively completed sciences no longer to be improved by small changes but only by major changes in an entire theoretical structure Further that at such a stage of mature theory the formerly viable norm of intra scientific autonomy may appropriately be replaced by the social direction of further scientific research within such a mature field for socially relevant or we may bluntly say task oriented purposes This is nothing less than a theory for the planning and social directing of science under certain specific conditions Understandably it raised the sharp objections that such an approach would subordinate scientific inquiry as a free and untrammelled search for truth to the dictates of social relevance and dominant interests even possibly to dictation and control for particularistic social and political interests *Symposium* European Association for the Study of Science and Technology, Society for the Social Studies of Science, 1997 Governance and Management of Sustainable Innovation Mattia Martini, Rick Hölsgens, Rafael Popper, 2020-08-10 Sustainable innovation SI is considered to be a key driver of societal progress in an era of enormous economic environmental and societal challenges and the uncertainties and future consequences that come with them This book provides evidence insights and reflections related to specific issues of governance the management of sustainable innovation and applying a multi level multi stakeholder approach to sustainable innovation analysis Building on the European Commission EU funded research project Public Participation in Developing a Common Framework for the Assessment and Management of Sustainable innovation CASI it presents tools for assessing and managing sustainable innovation and reflects on SI related policies as well as citizens aspirations The book is intended for scholars in the field of sustainable innovation as well as to policymakers innovators students and citizens *Philosophy of Technology and Engineering Sciences*, 2009-11-27 The Handbook Philosophy of Technology and Engineering Sciences addresses numerous issues in the emerging field of the philosophy of those sciences that are involved in the technological process of designing developing and making of new technical artifacts and systems These issues include the nature of design of technological knowledge and of technical artifacts as well as the toolbox of engineers Most of these have thus far not been analyzed in general philosophy of science which has traditionally but inadequately regarded technology as mere applied science and focused on physics biology mathematics and the social sciences First comprehensive philosophical handbook on technology and the engineering sciences Unparalleled in scope including explorative articles In depth discussion of technical artifacts and their ontology Provides extensive analysis of the nature of engineering design Focuses in detail on the role of models in technology *Knowledge* Nico Stehr, Reiner

A History of "Relevance" in Psychology Wahbie Long,2016-06-23 This book represents the first attempt to historicise and theorise appeals for relevance in psychology It argues that the persistence of questions about the relevance of psychology derives from the discipline s terminal inability to define its subject matter its reliance on a socially disinterested science to underwrite its knowledge claims and its consequent failure to address itself to the needs of a rapidly changing world The chapters go on to consider the relevance debate within South African psychology by critically analysing discourse of forty five presidential keynote and opening addresses delivered at annual national psychology congresses between 1950 and 2011 and observes how appeals for relevance were advanced by reactionary progressive and radical psychologists alike The book presents moreover the provocative thesis that the revolutionary quest for social relevance that began in the 1960s has been supplanted by an ethic of marketrelevance that threatens to isolate the discipline still further from the anxieties of broader society With powerful interest groups continuing to co opt psychologists without relent this is a development that only psychologists of conscience can arrest
