The Rio Declaration on Environment and Development Jorge E. Viñuales, 2015 The 1992 Rio Declaration on Environment and Development provides 27 principles to guide future sustainable development This book is the first commentary on the Declaration investigating the origins development and impact of each of the 27 principles on the ways in which sustainable development has been encouraged through international law

Global Development and the Environment Joel Darmstadter, 2016-03-17 In preparation for the United Nations Conference on Environment and Development in Rio de Janeiro in June 1992 this study aimed to detail enduring environmental issues that might or might not have been considered at the conference Originally published earlier that year Global Development and the Environment questions the compatibility of goals for environmental protection natural resource consequences and economic growth in relation to sustainability with essays on important topics such as biodiversity agriculture and population issues This title will be of interest to students of Environmental Studies and Economics

Environment, Growth, and Development Peter Bartelmus, 1994 Maurice Ravel A Research and Information Guide is an annotated bibliography concerning both the nature of primary sources related to the composer and the scope and significance of the secondary sources which deal with him his compositions and his influence as a composer and theorist

Environmental Management and Development Chris Barrow, 2004-03-01 The environment and its management has been and continues to be a very topical issue Existing environment and development texts place emphasis is on listing problems making warnings and voicing advocacy but by focusing on environmental management this informative book offers a very different perspective Moving on from the usual much discussed viewpoints Barrow looks towards practical management and problem solving techniques He clarifies the definition nature and role of environmental management in development and developing countries beginning with an introduction to the key terms issues and tools of environmental management which are linked and developed in later chapters and concluding by discussing who pays for environmental management and its future in developing countries Written by an experienced and well known author this clear user friendly book ideal for students of resource management geography and development studies makes excellent use of chapter summaries boxed case studies annotated further readings and websites discussion questions and illustrations

Environment and Development: An Economic Approach Jan Bojö, Karl-Göran Måler, Lena Unemo, 2013-03-09 This book is the second edition of a text based on a report commissioned by the Swedish International Development Authority SID A The financial grant from SIDA which made the work possible is hereby gratefully acknowledged There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for

environmental improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In particular we hope that the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier

Women, the Environment and Sustainable Development Rosi Braidotti, International Research and Training Institute for the Advancement of Women, 1994 There is a widespread perception that the development process is in a state of multiple crisis While the notion of sustainable development is supposed to address adequately its environmental dimensions there is still no agreed framework relating women to this new perspective This book is an attempt to present and disentangle the various positions put forward by major actors and to clarify the political and theoretical issues that are at stake in the debates on women the environment and sustainable development Among the current critiques of the western model of development which the authors review are the feminist analysis of Science itself and the power relations inherent in the production of knowledge Women Environment and Development WED Alternative Development Environmental Reformism and Deep Ecology Social Ecology and Ecofeminism In traversing this important landscape of ideas they show how they criticise the dominant developmental model at the various levels of epistemology theory and policy The authors also go further and put forward their own ideas as to the basic elements they consider necessary in constructing a paradigmatic shift emphasising such values as holism mutuality justice autonomy self reliance sustainability and peace This unique work is a signally useful contribution to clarifying thinking on a topic with immense implications for all women Publisher's description

Transformational Change for People and the Planet Juha I.

Uitto, Geeta Batra, 2022-01-13 This Open Access book deals with the pressing question of how to achieve transformational change that reconciles development with environmental sustainability. It particularly focuses on the role of evaluation in finding sustainable solutions. Environment and development are closely interlinked as are human health and ecosystem health. The pandemic that began in 2020 demonstrated in no uncertain terms how destruction of habitats has allowed hitherto unknown pathogens spill over to humans wreaking havoc on people's lives and livelihoods. We are already seeing the impacts of global climate change in terms of heatwaves, forest fires, and increased storms. The Sustainable Development Goals (SDGs) explicitly recognize the equal importance of the social, economic, and environmental dimensions of development. In these turbulent times when humankind faces multiple complex challenges, it is essential to know that our responses are effective and that they make a positive difference. Evaluation can provide invaluable lessons to how we design policies, strategies, and programs and how we allocate limited resources between competing priorities. This book brings together key thinkers and practitioners from the public and private sectors, from major multilateral organizations and from bilateral donor agencies to present the latest knowledge and experience on how to evaluate interventions in the nexus of environment and development. The book does not promote any particular approach or methodology but rather emphasizes the need for mixed methods to address the question at hand in the best and most suitable manner. It covers cases from a variety of fields: from climate change mitigation and adaptation, energy efficiency and renewable energy, natural resources management, biodiversity conservation, and more. This book is not a conference proceedings although it has its roots in the Third International Conference on Evaluating Environment and Development organized by the GEF Independent Evaluation Office in October 2019. The conference brought together a larger number of established and upcoming evaluators, researchers, and evaluation users from the Global North and South representing a wide variety of organizations to discuss the frontiers of environment and development evaluation. Following the conference, the editors identified and contacted the participants who made key contributions at the conference and asked them to develop their ideas and papers into book chapters according to a coherent plan.

Green Development William Mark Adams, 2001. This revised and updated new edition retains the clear and powerful argument which characterized the original. It gives a valuable analysis of the theory and practice of sustainable development and suggests that at the start of the new millennium we should think radically about the challenge of sustainability. Fully revised, this latest edition includes further reading, chapter outlines, chapter summaries, and new discussion topics and explores the roots of sustainable development thinking and its evolution in the last three decades of the twentieth century: the dominant ideas within mainstream sustainable development, the nature and diversity of alternative ideas about sustainability, the problems of environmental degradation and the environmental impacts of development, strategies for building sustainability in development from above and below. Offering a synthesis of theoretical ideas on sustainability based on the industrialized economies of the North and the practical applied ideas in the South which tend to

ignore First World theory this important text gives a clear discussion of theory and extensive practical insights drawn from Africa Latin America and Asia **National Report on Environment and Development** ,1992 Conference Proceedings--environment and Development Libby Bassett,1983 *Environment and Development* Peter Bartelmus,1986
