## **Environmental Biotechnology:**

Environmental Biotechnology Gareth M. Evans, Judith C. Furlong, 2003-06-13 The application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood. However, there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the macroscopic practical applications. It is precisely this gap which the book sets out to fill. Dividing the topic into logical strands covering pollution, waste and manufacturing, the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background. Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology. Essential reading for undergraduates and Masters students taking modules in Biotechnology or Pollution Control as part of Environmental Science, Environmental Management or Environmental Biology programmes. It is also suitable for professionals involved with water waste management and pollution control.

**An Introduction to Environmental Biotechnology** Milton Wainwright, 2012-12-06 An Introduction to Environmental Biotechnology provides an introduction to the subject of environmental biotechnology. Environmental biotechnology refers to the use of microorganisms and other living systems to solve current environmental problems such as the detoxification of pollutants and clean up of oil tanker spills. Additionally, it refers to the biotechnology of the agricultural environment as well as the use of biopesticides and the application of microorganisms to the mining metal recovery and paper industries. This is the only comprehensive introductory account of this subject matter. Beginning with an introduction to microbial growth, An Introduction to Environmental Biotechnology aims to provide the non-specialist with a complete overview of environmental biotechnology. It is presented in an easy-to-read style with illustrations and includes frequent references to the use of higher plants as well as microorganisms in environmental biotechnology. An Introduction to Environmental Biotechnology is geared toward a non-specialist audience including engineers and environmental chemists and environmental scientists who have limited knowledge of microbiology and biotechnology.

**Environmental Biotechnology** Zaini Ujang, Mogens Henze, 2004-08-31 The IWA Conference on Environmental Biotechnology Advancement in Water and Wastewater Application in the Tropics held in Kuala Lumpur, Malaysia on 9-10 December 2003 was a peer-reviewed conference. It was specially organized for Malaysia and the Asia Pacific region in collaboration between Universiti Teknologi Malaysia (UTM), the International Water Association (IWA), the Malaysia Water Association and the Malaysian Biotechnology Directorate. Papers presented in the conference covered current perspectives on the advancement of water and wastewater applications using environmental biotechnology as well as methodologies, techniques, modelling, case studies, directions and other specific issues. The emphasis was also on its feasibility in developing countries. The conference also focussed on the biodegradation and bioconversion, health-related microorganisms, microbial community structure and

Sayler,Robert Fox,James

Blackburn,2013-11-11 The use of biotechnical processes in control of environmental pollution and in hazardous waste treatment is viewed as an advantageous alternative or adduct to physical chemical treatment technologies Yet the development and implementation of both conventional and advanced biotechnologies in predictable and efficacious field applications suffer from numerous technical regulatory and societal uncertainties With the application of modern molecular biology and genetic engineering there is clear potential for biotechnical developments that will lead to breakthroughs in controlled and optimized hazardous waste treatment for in situ and unit process use There is however great concern that the development of these technologies may be needlessly hindered in their applications and that the fundamental research base may not be able to sustain continued technology development Some of these issues have been discussed in a fragmented fashion within the research and development community A basic research agenda has been established to promote a sustainable cross disciplinary technology base This agenda includes developing new and improved strains for biodegradation improving bioanalytical methods to measure strain and biodegradation performance and providing an integrated
