Comparing officially recommended diets and their environmental impacts** Pascal Schneider, 2020-01-22 Project Report from the year 2020 in the subject Environmental Sciences grade VG Uppsala University Earth Sciences course Energy Water and Food language English abstract It will be a big issue in the future to combine diets with the planetary boundaries Not only unhealthy eating habits should be reduced through education and transparency of ingredients Also the environmental impact will play a role to keep food production possible in the future The aim of this report is to investigate how the environmental impact of diets over time changed The focus will be on German food recommendations Food plates from the German Nutrition Society DGE from 1955 until today will be analyzed as possible diets that are seen as practicable and healthy from the respective time perspective The environmental impact can be externalities like GHG emissions biodiversity loss eutrophication et cetera The report stays broader with the externalities and will use a literature analysis to find out how a diet in general can be seen both as healthy and environmentally friendly rather than focusing on one outcome Not only is climate change influencing food production Additionally the food sector is the main accelerator of climate change responsible for 10 12 % of total human greenhouse gas GHG emissions Increasing crop production is made possible through a higher yield per hectare but agriculture today is more and more reliant on fertilizer and pesticide use which is accelerating biodiversity loss Agriculture influences the phosphorus and nitrogen cycles leading to water pollution and eutrophication Pesticide use and monoculture jeopardize pollinators and biodiversity Food recommendations by the German Nutrition Society DGE have been well developed over time but give a more superficial impression of a healthy diet Sustainability aspects are rather randomly implemented what shows that health and sustainability correlate The diet can still be improved in GHG emissions for example However consumption patterns in today s societies are still far away from the diet recommendations too high in animal products too low in vegetable consumption This so called western diet is a driver of civilization diseases biodiversity loss and GHG emissions **African Farming and Food Processing**, 2000 **Environmental Standards and Competitiveness of Key Economic Sectors**, 2005 This study provides examples from both sides of the debate namely a cases where conformity with environmental standards increases costs and reduces exports and b cases where the cost of conformity with environmental health and safety standards is minimal and where improvement in environmental performance provides opportunities for increasing competitiveness and accessing new markets The report seeks to underscore the importance of assessing the scope and scale of impact on key economic sectors within the framework of set environmental

requirements thereby informing effectively the decision making process and policy debate on sustainable development It uses the Larsen Model as an economic policy forecasting tool and focuses on Arab countries **Enviro** ,1997-12 **Lok Sabha Debates** India.
