*Water and Food Security in the Face of Climate Change: Challenges and Opportunities for Resilience* Salem Al-Naemi, Rachid Benlamri, Walter Leal Filho, Jeffrey

McDonnell, Rehan Sadiq, Haruna Musa Moda, 2025-11-15 This book addresses critical issues that align seamlessly with sustainability strategies. Extreme weather events including increasingly frequent and severe droughts and floods are now a global reality. Climate change poses a significant threat to both water and food security driven by the rising temperatures that intensify the demand for water in crop cultivation. This crisis is further exacerbated by declining river runoff, reduced aquifer recharge, diminished inflows, heightened salinity, and rising sea levels, all of which present formidable challenges to water management. Consequently, the livelihoods of rural communities and the food security of urban populations are in imminent danger due to water-related impacts stemming primarily from climate variability. The implementation of sustainable adaptation measures to address climate variability and promote enhanced land and water management practices has vast potential for fortifying resilience in both water and food security challenges. Therefore, the pivotal step in crafting policies to tackle these challenges lies in comprehensively assessing the impact of climate change on water resources and agricultural systems. Closely aligning these policies will not only enhance the resilience of agricultural systems against future impacts but also contribute significantly to the meeting of the United Nations Sustainable Development Goals (SDGs). To empower water resource management services for the future demands, it is imperative that we re-evaluate existing approaches to managing, mobilizing, and safeguarding this finite resource in the arid and semi-arid regions. This calls for the introduction of innovative technologies that facilitate integrated resource management and prevention. It is a premier platform for academics, researchers, students, policymakers, and stakeholders from government, industry, and society to explore pioneering ideas, techniques, and tools aimed at addressing the global impacts of climate change while concurrently reinforcing resilience in water and food security.

Environmental Changes Mark Brandon, Nigel Clark, 2003-12 This book introduces global environmental issues through two case study examples: small oceanic islands and the continent Antarctica. Both locations were discovered relatively recently and thus give us a clear and dramatic record of human impact. The book looks at how we deal with human-induced environmental change on an increasingly interconnected planet and ways in which distant places are linked. It considers the severity and complexity of environmental problems and how we can distinguish the human contribution to local and global environmental change from that which is caused by the Earth's natural variability. This leads on to the challenge of how we manage and direct our relationships with the physical world and the ecosystems we are part of. It also raises the vital question of who gets to participate in decision-making processes.
