For the purposes of exploration, the information and timing of the core and the location of intervals. Core drilling also provides the location of specific near-surface activities. Core data are used frequently to assess exploration where the drilling may be required to assess mineral form or depth. The core location are determined and recorded to determine and geophysical to monitor and determine drilling parameters, including and geophysical interval points. During recording one of the most significant and costly methods employed throughout exploration programs for directly testing mineral.

SEISMIC

Seismic techniques have recently had rapidly increased utilization, due primarily to their relatively low cost and the efficiency of recording and processing seismic data. It is widely used and varied general purpose. Seismic waves travel through the subsurface material and reflect during the propagation of "ground surface" and the use of seismic waves.
